

## Green Campus

Trees and other various saplings are planted regularly under the guidelines of Dept.of Botany considering the seasonal cyclonic devastation in our geographical surroundings, with the carbon neutrality approach. After cyclone Bulbul in November, 2019, plantation of trees near the college entrance and on both sides of the driveway has proved to be very helpful for eco-friendly environment. The college has made arrangements for parking of cycles/vehicles of the students and teachers near the entrance gate without disturbing green covers. To save the green and smoke-free environment, regular wastes and leaves are decomposed off by the norms of local Panchayat authority.

The College is organizing to set up **Solar panel** with help from Dept of Energy, Govt. of West Bengal and installation of large scale **modern scientific rainwater harvesting system** (to replace the existing small scale rainwater harvesting tank) with the generous help from P C Chandra Group. Other than use of LED lights, College has taken initiative to make the campus a totally **Plastic-free zone**, and waste generation is kept at a minimum.

We are fortunate to have distinguished faculty members. It has been our unanimous decision to thrust upon to make an exemplary green campus in this rural area. Accordingly, we conserve natural resources like water and biodiversity, optimize energy efficiency, manage waste

### **(REDUCE, REUSE, RECYCLE)**

On top of the above philosophy we also encourage REFUSE Plastics, and educate the local community about climate change and sustainability while addressing the overall growth and development index of the students.
