Department of Physics :

The department runs Undergraduate Honours and General Courses under the Choice-Based Credit System (CBCS) introduced in 2018-19 session. Under the present CBCS curriculum of UG Physics programme, the students are expected to have the following expertise by the end of the degree program:

- As the present CBCS syllabus has invoked a lot of application-based knowledge area, such as current programming language: Python, scientific writing editor: Latex, etc., students should demonstrate an understanding of core knowledge in physics, with ready to be a part in academic, research, or IT based industries, with proficiency in language (skill enhancement course) communication.
- Students would be able to demonstrate written and oral communication skills in communicating physics-related topics.
- Students would be able to design and conduct an experiment or series of experiments, demonstrating their understanding of the scientific methods and processes.
- Students should demonstrate an understanding of the analytical methods required to interpret and analyze results and draw conclusions as supported by their data.
- Students should demonstrate proficiency in the acquisition of data using a variety of laboratory instruments and in the analysis and interpretation of such data.
- Students could utilize a wide range of printed and electronic resources and information technologies to support their research on physical systems and present those results in the context of the current understanding of physical phenomena.
- Students would be able to demonstrate understanding of the applications of numerical techniques for modelling physical systems for which analytical methods are inappropriate or of limited utility.
- Students will demonstrate a thorough understanding of the analytical approach to modeling of physical phenomena.
- Students will demonstrate an understanding of the impact of physics and science on society.

Subject Outcomes (Nos)	Subject Outcomes (SO)
SO 1	To prepare the students for a successful career in industry as well as to motivate them for higher education and to take research as a career
SO 2	To provide strong foundation in basic sciences and mathematics

SO 3	To identify, formulate and analyze complex scientific problems reaching substantiated conclusions
SO 4	To develop individual and team work by functioning effectively as an individual or as a member in a group in laboratory classes
SO 5	Ability to use modern techniques, sophisticated instruments, current application softwares and to handle different types of electrical and electronic circuits
SO 6	To develop computational acumen in solving different analytical problems of Physics
SO 7	To develop communicating ability such as being able to comprehend and write effective laboratory notebooks and design documentation, prepare effective presentations, and give and receive clear instructions
SO 8	To develop an opportunity to work in interdisciplinary groups
SO 9	To develop the ability to engage in independent and life-long learning in the current context of technological change
SO 10	To inculcate scientific temperament in the young minds and outside the scientific community

Programme Objectives:

- To help students gain knowledge about various basic concepts of Microbiology and develop experimental skills
- To develop their presentation and articulation skills
- To expose the candidates to industry and interaction with industry experts
- To help build research mind set among students

Programme Outcomes:

PO-1	Knowledge of discipline- Graduates will understand the basic concepts, underlying principles, scientific theories related to varied scientific phenomena and their relevance to day to day life.
PO-2	Research Skills- Student would be confident enough to handle laboratory instruments, designing and executing scientific experiments
PO-3	Cognitive and communicative skills – Students would be able to develop good reading, writing, speaking skills.
PO-4	Problem solving- Students would be able to identify and analyze course related problems
PO-5	Critical thinking- Graduates will imbibe good observation skill, analytical mind, logical thinking and systematic approach to make decision through this course
PO-6	Analytical skill- Students would be able to develop analytical skill through design of experiments, their execution and result analysis.
PO-7	Team work and ethical values- Graduates would be able to think as a team and execute community related awareness issues through the use of microbiological knowledge. They

	would appreciate the role of social and ethical values in their lives.
PO-8	Sustainability -Students will be able to recognize the importance of environment and goals of sustainable development.
PO-9	Entrepreneurship and employability -Graduates would be able to build their career as an entrepreneur or employee.
PO-10	Leadership quality -Graduates would imbibe critical thinking, analytical skill, problem solving, decision making, innovative thinking along with social and ethical values – all these will make them leaders for future India.

COURSE	LEARNING OBJECTIVE	COURSE OUTCOME
CC-1 THEORY	This course aims to generate deeper understanding of the development of microbiology as a discipline, diversity of the organisms and bird's eye view of the scope of the subject	<ul style="list-style-type: none">➤ To understand and become familiar of core principles and experimental basis of the development of Microbiology discipline➤ Ability to classify and diversify cellular and acellular forms according to their structure, reproduction, identification, ecological significance and economic importance➤ Students will be acquainted with the scope of different fields of microbiology
CC-1 PRACTICAL	Learning of dos and don'ts of microbiology good laboratory practices. Study of principles and applications of basic microbiological laboratory instruments and identifying different class of microorganisms	<ul style="list-style-type: none">➤ To build confidence in students while handling of laboratory instruments➤ Ability to recognize microscopic characteristics of different class of microorganisms➤ To develop practical skills to prepare and sterilize microbial growth media
CC-2 THEORY	To study cellular organization, growth, nutrition and reproduction of bacteria. To learn basic principles of microcopy and bacteriological techniques. To study bacterial systematics as well as important archaeal and eubacterial groups.	<ul style="list-style-type: none">➤ To realize basic requirements like physical, chemical and nutritional parameters for microbial growth➤ To understand basics of microscopy and aseptic techniques in Microbiology➤ To understand bacterial systematic, important archaeal, gram-positive and gram negative eubacterial groups
CC-2 PRACTICAL	To get acquainted with tools and methods of Microbiology. To learn aseptic techniques in Microbiology as well as cultivation, isolation and preservation of microorganisms. To	<ul style="list-style-type: none">➤ To master tools and methods of Microbiology➤ To acquire skill in aseptic techniques in Microbiology as well as cultivation, isolation and preservation of microorganisms➤ To understand the morphology of microorganisms

	study the morphology of microorganisms	
CC-3 THEORY	To learn about the structure and function of biological macromolecules. To provide advanced understanding of the structure and mechanism of action of enzymes. To learn underlying principles of bioenergetics. To study the characteristics of vitamins.	<ul style="list-style-type: none">➤ Understanding the role of biological macromolecules through their structure, function and interactions with other biomolecules➤ To appreciate the importance of enzyme in metabolism➤ To describe the relevance of energetics in biological systems specially in cellular events➤ To understand the importance of vitamins
CC-3 PRACTICAL	To learn the concept of acid, base and buffer. To learn to analyze carbohydrate, protein and fats qualitatively and quantitatively. To study enzyme kinetics and the effect of temperature, pH and heavy metals on enzyme activity.	<ul style="list-style-type: none">➤ To master the concepts of acid, base and buffers➤ Ability to solve numerical problems on standard free energy change and equilibrium constant➤ Developing skill to detect carbohydrates, protein and fats qualitatively and quantitatively➤ To acquire skill in characterizing enzymes
CC-4 THEORY	To learn the structure and organization eukaryotic cell. To study the nuclear structure, sorting of proteins in endoplasmic reticulum and Golgi apparatus. To learn about the process of cell signaling, cell cycle, cell death and cell renewal.	<ul style="list-style-type: none">➤ Ability to understand the structure and organization of cell➤ Appreciate the importance of cellular organelles like nucleus, ER, Golgibodies and lysosomes etc. Role of organelles in protein sorting and transport.➤ Understanding of cell signaling pathways➤ Developing concept of regulation of cell cycle and its relation to cancer, idea of programmed cell death
CC-4	To study representative animal and	<ul style="list-style-type: none">➤ To describe and characterize different

PRACTICAL	plant cell. To study different stages of mitosis and meiosis. Learning to stain DNA, mitochondria.	subcellular organelles ➤ To develop skills to identify DNA and mitochondria through staining procedures ➤ To understand different stages of mitosis and meiosis
CC-5 THEORY	To learn about nature and properties of viruses. To study diversity and classification of viruses with special emphasis on viral transmission, features of nucleic acids and replication. To study the relationship between virus and cancer. To learn about control methods of virus and application of virus in therapy.	➤ Understanding characteristics of virus, its diversity, transmission and replication. ➤ To develop concept of oncogenic viruses ➤ To gain understanding of the control methodologies of virus and how virus can be applied in therapy.
CC-5 PRACTICAL	To study the structure of important animal, plant and bacterial viruses. Learning to isolate and enumerate bacteriophages. To study cytopathic effects of virus.	➤ Ability to identify electron micrograph of animal, plant and bacterial viruses. ➤ To develop skills to isolate and enumerate bacteriophages from environmental samples. ➤ Understanding the cytopathic effects of virus
CC-6 THEORY	Learning the concepts of microbial growth in response to environment, nutrition and energy. To study the process of nutrient uptake and transport in microorganisms. To study different anabolic and catabolic reactions in microbial cell in presence of oxygen (also absence), atmospheric nitrogen and photon.	➤ Generating in-depth knowledge of microbial growth, process of nutrient uptake and transport ➤ Developing concepts of microbial metabolic processes. ➤ Understanding energy generation processes in microorganisms
CC-6	To study the effect of environment on microbial growth. To determine growth curve of bacteria,	➤ Ability to plot microbial growth curve ➤ Building confidence in calculating generation time and specific growth rate of

PRACTICAL	generation time and specific growth rate of bacteria.	microorganisms ➤ Ability to predict the effect of environment and nutrient on microbial growth
CC-7 THEORY	To study the detailed structure of nucleic acids. To learn underlying mechanism of central dogma of life both prokaryotic and eukaryotic. Learning principles of regulation of gene expression in prokaryotes and eukaryotes. To get clear concepts of post transcriptional processing in eukaryotes.	➤ Development of in-depth knowledge of genetic material ➤ Understanding salient features of replication, transcription and translation processes in prokaryotic and eukaryotic cells ➤ Developing concepts of underlying principles of transcriptional regulation in both microbial systems
CC-7 PRACTICAL	To study DNA, RNA and semi-conservative replication using micrograph and model/schematic representations. To isolate genetic materials from microbial cells. To estimate DNA and RNA using colorimeter/spectrophotometer. To resolve and visualize DNA and protein samples through gel electrophoresis.	➤ Ability to identify and characterize genetic materials through micrograph or models ➤ To develop skills to isolate DNA from microbial cells ➤ Ability to quantitate DNA/RNA of unknown samples from standard curve data ➤ Ability to interpret approximate sizes of DNA/protein bands
SEC-A1 THEORY	Learning good laboratory practices and microbiological practices. To know about biosafety cabinets and specifications of biosafety laboratory standards. To study microbial species present in food and pharmaceutical samples. To study detection methods of pathogenic microorganisms present in water and food. To learn concepts of HACCP and microbial	➤ Developing concepts of good laboratory and microbiological practices ➤ Generating idea of biosafety cabinets and specifications of standard biosafety laboratory ➤ Ability to predict the presence of microbial species in food and pharmaceutical samples ➤ Understanding the basis of detection methods of pathogenic microorganisms from water and food samples ➤ Developing in-depth concept of HACCP and microbial standards for food and water

	and immunoelectrophoresis.	method ➤ Gaining experimental skill to predict nature of antibody through immunoelectrophoresis ➤ Developing skills to perform DOT ELISA
CC-14 THEORY	To get the idea of normal microflora of human body. To learn about collection, transport and culturing of clinical samples. To get familiar with different bacterial, fungal, viral and protozoan diseases of various organs and their causative agents. To study about general characteristics and mode of action of several antimicrobial agents.	➤ Understanding normal microflora of human body and the concept of host pathogen interaction ➤ Ability to gather in-depth knowledge to collect, transport and culturing of clinical samples ➤ Appreciating general characteristics and mode of action of various antimicrobial agents ➤ Developing insight of bacterial, fungal, viral and protozoan diseases of various organs
CC-14 PRACTICAL	To identify several bacterial strains based on cultural, morphological and biochemical characteristics. To study composition and application of some differential media. To appreciate bacterial flora of human skin. To perform antibacterial sensitivity through Kirby-Bauer method. To determine minimum inhibitory concentration of antibiotics. To study symptoms of different diseases through photographs. To study various stages of malarial parasite in RBC using permanent mounts.	➤ Ability to identify bacterial species on the basis of cultural, morphological and biochemical characteristics ➤ Developing practical skill to prepare and use differential media ➤ Ability to characterize bacterial flora of skin ➤ Developing skill to determine antibacterial sensitivity by Kirby Bauer method ➤ Mastering experimental skill to determine MIC of antibiotics
DSE-A3	To get introduced to plant pathology. To learn about	➤ Understanding the concept of plant diseases and their epidemiology

DEPARTMENT OF ZOOLOGY

(Programme Outcome, Course Outcome, and Programme Specific Outcome) Prescribed in University of Calcutta Syllabus (2018-2019) within the CBCS

PROGRAMME OUTCOME

Department of Zoology

Programme Outcomes	
PO 1	Acquiring in-depth knowledge
PO 2	Analysis and corroboration
PO 3	Laboratory skills and Instrumentation
PO 4	Skill Enhancement
PO 5	Design and Performance of Experiments
PO 6	Analysis with statistical inference
PO 7	Building of Environmental ethics, Sustainability, and Conservation
PO 8	Communication, bonding, and learning through group activity

Programme Specific Outcome in Zoology

- **PSO 1:** Students will develop an understanding of key concepts of biology at organismic, ecological, behavioural, physiological, biochemical, and molecular levels.
- **PSO 2:** Students build a clear concept of genetic and molecular principles of traits from human and non-human organisms, including the description of several molecular events controlling gene expression in various physiological processes, including sex determination.
- **PSO 3:** Students gain knowledge of the internal structure of cells and their functions in controlling various metabolic pathways of an organism.
- **PSO 4:** Students become aware of animal-animal, animal-plant, and animal-microbe interactions and their consequences on the environment, with special emphasis on conservation, helping understand

Date:

environmental conservation processes and the importance of pollution control, biodiversity, and protection of endangered species.

- **PSO 5:** Students gather knowledge of the internal structure of cells and their functions and control of various metabolic functions of organisms.
- **PSO 6:** Students gain understanding in medical entomology, apiculture, aquaculture, sericulture, medical diagnostics, animal cell biotechnology, and modern biotechnological tools.
- **PSO 7:** Students develop theoretical and practical knowledge in handling animals and their roles in the environment.
- **PSO 8:** Through this programme, students achieve high standards of learning in animal sciences and develop a multidisciplinary approach to work collaboratively, gaining a comprehensive knowledge of biological processes.

Course Outcome (Department of Zoology)

Programme-Honours (2018-2019, 2019-2020, 2020-2021)

Semester I

Course	Code	Outcome
Theory	CC-1-1-TH	CO 1: Students understand the non-chordate world through this module.
		CO 1.1: Learn the process of evolution in non-chordates from unicellular cells to complex multicellular organisms.
		CO 1.2: Identify invertebrates and classify them up to the class level based on systematics.
		CO 1.3: Learn the basis of life processes in non-chordates and recognize economically important invertebrate fauna.
Practical	CC-1-1-P	CO 1.4: Gain an understanding of general characters and classification of Acoelomates to Pseudocoelomates.
		CO 1.5: Identify animals through practical learning using models/charts/e-resources, helping students identify organisms.

Date:

Course	Code	Outcome
Theory	CC-1-2-TH	CO 2: Get an idea of life at the molecular level.
		CO 2.1: Understand developments in molecular biology and its implications in human welfare.
		CO 2.2: Exposure to the emerging field of research in Molecular Biology.
Practical	CC-1-2-P	CO 2.3: Gain observational, analytical, and evaluation skills in molecular biology.

Semester II

Course	Code	Outcome
Theory	CC-2-3-TH	CO 3: Learn general characters and classification of coelomates and the affinities between different groups.
		CO 3.1: Understand the classification of whole phyla in Nonchordates with charts/models/pictures.
		CO 3.2: Gain knowledge about various internal systems like the digestive and nervous systems.
Practical	CC-2-3-P	CO 3.3: Acquaintance with general characters and classification of coelomates through charts, models, and e-resources.
Theory	CC-2-4-TH	CO 4: Develop a deeper understanding of life at the cellular level.
		CO 4.1: Learn about cellular membrane structure and function, and fine structure and function of cell organelles.
		CO 4.2: Perform a variety of molecular and cellular biology techniques.

Date:

Course	Code	Outcome
Practical	CC-2-4-P	CO 4.3: Handle and adjust microscopes, observe chromosomal arrangements during cell division, and distinguish different chromosomal alterations in humans.

Semester III

Course	Code	Outcome
Theory	CC-3-5-TH	CO 5: Inculcate fascination for nature and learn the bionomics of vertebrates.
		CO 5.1: Learn the evolution, hierarchy, and classification of different classes of chordates.
		CO 5.2: Overview the morphology and physiology of typical examples.
		CO 5.3: Become familiar with adaptations and the economic importance of specific vertebrates.
Practical	CC-3-5-P	CO 5.4: Acquaintance with the systematic positions of animals, morphological features, and relations among different animals through charts, models, and e-resources.
Theory	CC-3-6-TH	CO 6: Gain knowledge about the function of various systems.
		CO 6.1: Overview the morphology and physiology of typical examples.
		CO 6.2: Familiarize with the physiology of the human body and learn precautionary measures to safeguard health.
Practical	CC-3-6-P	CO 6.3: Develop skill in simple biophysiological laboratory procedures.

Date:

Course	Code	Outcome
Theory	CC3-7-TH	CO 7: Understand the structural arrangements and metabolism of carbohydrates, lipids, proteins, and nucleic acids.
		CO 7.1: Structural arrangements of carbohydrates and their application in metabolism and regulation.
		CO 7.2: Structural arrangements of lipids and their application in metabolism and regulation.
		CO 7.3: Structural arrangements of proteins and their application in metabolism and regulation.
		CO 7.4: Structure of nucleic acids and their metabolism and biosynthesis.
		CO 7.5: Enzyme classification, specificity, action mechanism, kinetics, and inhibition.
		CO 7.6: Mitochondrial respiratory chain, inhibitors, uncouplers, and mechanisms of oxidative phosphorylation.
Practical	CC3-7-P	CO 7.7: Qualitative analytical techniques to detect biomolecules like carbohydrates, proteins, and lipids.
		CO 7.8: Techniques to detect biomolecules like urea and uric acid.
		CO 7.9: Techniques to separate biomolecules by charge, molecular weight, size, and chemical nature.
		CO 7.10: Quantitative analysis techniques to detect biomolecules using optical density.

Course	Code	Outcome
Theory	SEC(A)-3-1-TH	CO 8: Learn the morphology, social behaviour, and culture methods of honeybees.
		CO 8.1: Morphology and social behaviour of bees.
		CO 8.2: Modern instruments and methods in honeybee culture.
		CO 8.3: Diseases of honeybees and control measures.
		CO 8.4: Apiary products and their uses.
		CO 8.5: Modern methods to improve the bee industry.
Theory	SEC(A)-3-2-TH	CO 9: Learn taxonomy, morphology, and culture of silk moths.
		CO 9.1: Taxonomy, morphology, and distribution of silk moths.
		CO 9.2: Life history of Bombyx mori.
		CO 9.3: Culture of mulberry plants.
		CO 9.4: Pest and disease control in silk moths.

Semester IV

Course	Code	Outcome
Theory	CC-4-8-TH	CO 10: Understand comparative anatomy and physiology of vertebrates.
		CO 10.1: Comparative anatomy of integument, digestive, respiratory, circulatory, and excretory systems.
		CO 10.2: Comparative study of vertebrate skeletons, brain, and sense organs.

Practical	CC-4-8-P	CO 10.3: Comparative study of vertebrate skeletons through permanent slides/photographs.
		CO 10.4: Study of disarticulated skeletons of various vertebrates.
		CO 10.5: Comparative study of vertebrate hearts and brains.
Theory	CC-4-9-TH	CO 11: Understand the physiology of digestion, respiration, circulation, and excretion in vertebrates.
		CO 11.1: Physiology of digestion and absorption.
		CO 11.2: Mechanism of respiration and gas transport.
		CO 11.3: Physiology of circulation, cardiac cycle, and blood pressure regulation.
		CO 11.4: Thermal regulation and osmoregulation in vertebrates.
Practical	CC-4-9-P	CO 11.5: Blood grouping and hemoglobin estimation.
		CO 11.6: Observation of human and cockroach blood cells.
		CO 11.7: Measurement of blood pressure.
Theory	CC-4-10-TH	CO 12: Learn about the immune system, antigens, antibodies, and immune responses.
		CO 12.1: Cells and organs of the immune system.
		CO 12.2: Structure and function of immunoglobulins.
		CO 12.3: Antigen-antibody interactions and immunoassays.
Practical	CC-4-10-P	CO 12.4: Demonstration of lymphoid organs.

Programme-General (2018-2019, 2019-2020, 2020-2021)

Year	Semester	Paper	Course	Outcome
Part I	Sem I	CC1/GE1	CO 1	Learn general characteristics and classifications of Nonchordate and Chordate phyla.
Part I	Sem II	CC2/GE2	CO 2	Learn integumentary systems and early embryonic development.
Part II	Sem III	CC3/GE3	CO 3	Understand nerve and muscle physiology, digestion, and respiration.
Part II	SEC-A(1)		CO 4.	Learn the morphology and culture methods of honeybees
Part II	Sem IV	CC4/GE4	CO 5	Understand genetic inheritance and evolutionary theories.
Part II	SEC-B(1)		CO 6	Learn aquarium fishery techniques and biology of ornamental fishes.
Part III	Sem V	DSEA(1)	CO 7	Understand parasitology and the biology of economically important insects.
Part III	DSEB(1)		CO 8	Learn about aquatic ecosystems and pollution.
Part III	SECA(2)		CO 9	Understand the taxonomy and culture of silk moths.

DSE-A (Group- A) SEM-V Biostatistics (BOT-A-DSE-A-51TH, BOT-A-DSE-A-5-1-P)

1.

Industrial and Environmental Biology (BOT-A-DSE-A-5-2-TH, BOT-A-DSE-A-5-2-P) SEM VI

Medicinal and Ethnobotany (BOT-A-DSE-A-6-3-TH, BOT-A-DSE-A-6-3-P)

Stress Biology (BOT-A-DSE-A-6-4-TH, BOT-A-DSE-A-6-4-P) DSE-B (Group-B)

SEM V

1.

Plant Biotechnology (BOT-A-DSE-B-5-5-TH, BOT-A-DSE-B-5-5-P)

Horticultural practices and Post Harvest Technology (BOT-A-DSE-B-5-6-TH, BOT-A-DSE-B-5-6- P)

SEM VI

1.

Research Methodology (BOT-A-DSE-B6-7-TH, BOT-A-DSE-B-6-7-P)

Natural resource management (BOT-A-DSE-B-6-8-TH, BOT-A-DSE-B-6-8-P)

Programme Outcome:

• **Apply the knowledge of biology to make scientific quires and enhance the comprehension potential.**

Convey and practice social, environmental and biological ethics.

Insist the significance of conserving a clean environment for perpetuation and sustainable development.

Study incessantly by self to cope with growing competition for higher studies and employment.

To provide adequate knowledge and skill to the students' which might be enabled them to pursue further studies in Botany and related areas or multidisciplinary areas that can be helpful for self-employment/entrepreneurship.

Date:

To provide the latest subject matter, both theoretical as well as practical, such a way to foster their core competency and discovery learning. A botany graduate in this framework would be sufficiently competent in the field to undertake further discipline-specific studies, as well as to begin domain-related employment.

B.Sc. Chemistry (Hons. and Gen.)

Program Outcome

Chemistry is the fundamental study of the structures, properties, and reactions of all matter in existence throughout the universe and underpins the central sciences of Biology and Physics. There are four main sub-disciplines of chemistry and the Honours course focuses on delivering a rigorous knowledge and understanding of all aspects of inorganic, organic, physical, and analytical chemistry:

- **Inorganic chemistry** studies materials such as metals and their salts.
- **Organic chemistry** involves the study of compounds containing primarily carbon.
- **Physical chemistry** measures the interaction of matter and energy.
- **Analytical chemistry** involves qualitative and quantitative observations and spectroscopy – study of a range of practical skills to understand and assess risks and work safely and competently in the laboratory.

The program outcome may be categorised as follows:

Program Outcomes (PO)	Description
PO 1	Students will be capable of demonstrating comprehensive knowledge and understanding both theoretical and practical in all disciplines of Chemistry.
PO 2	Students can solve their subjective problems very methodically, independently, and finally draw a logical conclusion.
PO 3	Students can develop critical thinking and to design, carry out, record, and analyze the results of chemical reactions.
PO 4	Students will be able to get good laboratory practice with proper safety.

Date:

Program Outcomes (PO)	Description
PO 5	Students can find out the green route for chemical reaction for sustainable development.
PO 6	Students will be capable of applying modern technologies, handling advanced instruments, and Chemistry-related software for chemical analysis, characterization of materials, and in separation technology.
PO 7	Students will be made aware of the impact of chemistry on the environment, society, and development outside the scientific community.
PO 8	To prepare the students for a successful career in industry and to motivate them for higher education and take up research as a career.
PO 9	To develop an opportunity to work in interdisciplinary groups.

Program Specific Outcome

Program Specific Outcomes (PSO)	Description
PSO 1	To apply appropriate techniques for the qualitative and quantitative analysis of chemicals in laboratories and in industries.
PSO 2	The students shall be made familiar with the different branches of chemistry like analytical, organic, inorganic, physical, environmental, polymer, medicinal, and biochemistry.
PSO 3	Students shall acquire the ability to synthesize, separate, and characterize compounds using laboratory and instrumentation techniques.
PSO 4	To develop leadership and managerial skills promoting the need for lifelong learning as required for a competent professional.
PSO 5	To explain nomenclature, stereochemistry, structures, reactivity, and mechanism of the chemical reactions.

Date:

Program Specific Outcomes (PSO)	Description
PSO 6	To identify chemical formulae and solve numerical problems.
PSO 7	Students shall achieve the skills required to succeed in graduate school, professional school, and the chemical industry like Cement industries, Agro product, Paint industries, Rubber industries, Petrochemical industries, Food processing industries, Fertilizer industries, etc.
PSO 8	Students will be able to understand the importance of the elements in the periodic table including their physical and chemical nature and role in daily life.

Course Outcome

Based on University of Calcutta Syllabus for Honours (CBCS)

Semester	Course Code	Course Outcomes
SEM1	CC1-1-TH	Inorganic Chemistry-1
		CO1. To learn about the extra nuclear structure of atom and get a basic idea about Quantum Chemistry and its Application.
		CO2. Gives an idea about different types of acids, their definitions and also gives a clear concept about pH, buffer, and indicator.
		CO3. To get an idea of redox reaction – Oxidation and reduction reaction, oxidation number, competitive electron transfer reaction, electrode process.
SEM1	CC1-1-P	Inorganic Chemistry: I (1) LAB
		CO4. To study the estimation of ions or salts by acid-base titration method and oxidation-reduction titration method.
SEM1	CC1-2-	Physical Chemistry-1

Date:

Semester	Course Code	Course Outcomes
	TH	
		CO1. To get some fundamental understanding of the concept of pressure, temperature, average velocity, average energy, etc. of gas molecules and able to derive the expressions of those properties using Kinetic Theory of gas.
		CO2. To get some ideas about various transport processes such as diffusion and viscosity and their measurements.
		CO3. Help the students to understand the basic concepts regarding rates of various chemical reactions, measurements of the order and rate of the reactions, dependence of rate constants and hence the rate of the reaction on temperature, catalysts, etc. and plausible mechanisms of the reactions.
SEM1	CC1-2-P	Physical Chemistry: P (1) LAB
		CO4. The laboratory course enables students to determine the viscosity of unknown liquid with respect to water by using an instrument like Viscometer, solubility of sparingly soluble salt in water and in presence of electrolyte with common ion and in presence of non-electrolyte. They will also study the kinetics of various chemical reactions.
Semester	Course Code	Course Outcomes
SEM2	CC2-3-TH	Organic Chemistry-2
		CO1. It provides an advanced idea on axial chirality, topicity, etc., and the conformational analysis of organic molecules.
		CO2. Students will learn the thermodynamics of organic reactions and basic concept reaction mechanism.

Semester	Course Code	Course Outcomes
SEM2	CC2-3-P	Organic Chemistry LAB
		CO3. To get a detailed idea about the nucleophilic substitution reactions (SN1, SN2) along with NGP and S _N i and stereochemical and regiochemical outcome of elimination reactions.
		CO4. The laboratory course enables students to get basic skill of organic synthesis through the preparation methodology.
SEM2	CC2-4-TH	Inorganic Chemistry-2
		CO1. To get an idea about Ionic bond and Covalent bond laws, rules and equations for the formation of chemical bonds, solubility, hybridization, and dipole moment of molecules.
		CO2. To develop a concept about MOT (Molecular orbital theory), LCAO (Linear combination of atomic orbitals), Metallic bond, and Weak Chemical Forces, etc.
		CO3. To understand the concept of radioactivity and radioactive compounds, nuclear reactions, artificial radioactivity, radiocarbon dating, hazards of radiation, and safety measures.
SEM2	CC2-4-P	Inorganic Chemistry LAB
		CO4. To know experimentally how to estimate the percentage of chlorine in bleaching powder; vitamin C; arsenic and antimony in a sample by iodimetric titration method. Students can also learn how to estimate Cu in brass, Cr and Mn in steel, and Fe in cement.
Semester	Course Code	Course Outcomes
SEM3	CC3-5-TH	Physical Chemistry-2
		CO1. Students will learn three-dimensional structure of organic molecules which is very much

		essential to visualize molecules.
		CO2. To get an idea about the structure and nature of intermediates like carbocations, carboanions, radicals, and carbenes.
SEM3	CC3-5-P	Physical Chemistry LAB
		CO3. The laboratory course helps students to develop laboratory training to use melting point and boiling apparatus.
SEM3	CC3-6-TH	Inorganic Chemistry-3
		CO1. To study in detail about the modern periodic table, physical and chemical properties of the elements along a group or period, factors influencing those properties, relativistic effects, and inert pair effect.
		CO2. To study the chemistry of s and p block elements and to get an elementary idea about occurrence, use of Noble gases, Nature of bonding of Noble gas compounds, and their preparations including noble gases and their compounds in detail.
		CO3. To learn about inorganic polymers with types, structural aspects, and their applications in detail.
		CO4. To get a basic idea about different types of coordination complexes, theory of coordination complexes, and their nature of bonding. To learn about the Werner's theory for complex formation, structural and stereoisomerism of coordination complexes.
SEM3	CC3-6-P	Inorganic Chemistry LAB
		CO5. To learn the complexometric and gravimetric estimation of different ions, chromatographic separation of (i) Ni (II) and Cu (II) ions, (ii) Fe (III) and Al (III) ions.

SEM3	CC3-7-TH	Organic Chemistry-3
		CO1. To get a detailed idea about the electrophilic addition reactions of organic molecules with stereochemistry.
		CO2. It informs about the preparation of different aromatic compounds using the idea of substitution reaction.
		CO3. To get a detailed idea about nucleophilic addition to carbonyl carbon 1,2- addition vs 1,4- addition by using organometallic compounds.
		CO4. The students learn the application of organic reaction and some tricks for qualitative and quantitative analysis of some organic compounds used in daily life.
SEM3	CC3-7-P	Organic Chemistry LAB
		CO5. The laboratory course enables students to perform the identification and synthesis of various organic compounds.
SEM3	SEC-1	Mathematics and Statistics for Chemists
		CO1. To get a basic idea of mathematical functions, differential equations, probability, vectors, matrices, and determinants.
		CO2. To learn about qualitative and quantitative aspects of analysis and helps to understand how to present data after analysis.
SEM3	SEC-A	Analytical Clinical Biochemistry
		CO1. To learn about the preparation, structures, reactions, and biological importance of carbohydrates, proteins, enzymes, lipids, and lipoproteins.

	TH	
		CO1. Students will learn the thermodynamic basis of various colligative properties, its derivation, various applications, and its abnormal behavior. Students will also understand the background of phase transitions and the behavior of binary solutions.
SEM4	CC4-9-P	Physical Chemistry LAB
		CO2. To develop a concept about the fundamental quantum theories which help the students to understand wave-particle duality of matter and uncertainty relationship. Students will become familiar with the techniques to solve the translational motion of quantum mechanical system by modeling particle in box problem with the help of fundamental postulates of quantum mechanics.
		CO3. To understand about the various types of solids, lattices, laws of crystallography, representation of crystal planes, and able to solve the dilemma of classical picture of calculation of specific heat of solid.
		CO4. To know experimentally how to handle digital polarimeter and study the kinetics of inversion of cane sugar by using it. They will also learn to draw the phase diagram of binary solvents. They will also handle digital pH meter for pH metric titration of dibasic and tribasic acid against strong base.
SEM4	CC4-10-TH	Inorganic Chemistry-4
		CO1. To get an idea about elementary Crystal Field theory, MO concept, Magnetism, Colour, Magnetic moment, and Selection rules for electronic spectral transitions, etc.
SEM4	CC4-10-P	Inorganic Chemistry LAB
		CO2. To get a basic idea about transition elements (3d, 4d, and 5d) like their electronic

		CO2. To learn about various photochemical and photophysical processes like fluorescence, phosphorescence, etc., various laws of photochemistry, and the concept of quantum yield. Students are also able to get knowledge regarding the detailed theoretical and mathematical treatment of reaction rate and the mechanism of unimolecular reactions.
		CO3. To get information about the origin of various surface properties such as surface tension, adsorption, etc., and molecular properties such as dipole moment and polarizability. They will also learn the various types of colloids, their stability, electro-kinetic phenomena, and the concept of micelle.
		CO4. The students will learn to handle very sophisticated instruments like Spectrophotometer to perform various spectroscopy-based experiments like verification of Lambert-Beer's law and measurement pH of unknown buffer solution, indicator constant of acid-base indicator, rate constants of chemical reactions. They will also be able to handle instruments like Stalagmometer for the determination of surface tension of liquid and CMC of micelle.
SEM6	DSE	Green Chemistry and Chemistry of Natural Products
		CO1. Students of undergraduate course are continuously being introduced and encouraged about the different possibilities in this field. It helps students to think and perform to design and develop environmentally benign methods for organic synthesis.
SEM6	DSEA-4	Analytical Methods in Chemistry
		CO1. Helps to learn about different analytical methods (Flame Atomic Absorption and Emission Spectrometry, Thermogravimetry, pH metric, Potentiometric, and Conductometric Titrations) to identify and separate the products formed during different chemical transformations.
		CO2. To study the fundamental laws of spectroscopy and selection rules.
		CO3. To learn the methods of separation of stereoisomers by spectral, chemical, and

		CO2. To learn the basic concept of Crystal Field Theory.
		CO3. To learn about the fundamentals of Quantum Chemistry and Spectroscopy.
		CO4. To learn experimentally the qualitative analysis of single solid organic compound(s) and identification of a pure organic compound.
SEM4	SEC-B	Pharmaceuticals Chemistry
		CO1. To learn about the drug discovery, design, and development of representative drugs of the following classes: Analgesics, Antipyretic, Anti-inflammatory, Anti-bacterial, Antifungal, Antiviral, Antibiotics, Anti-leprosy, Central Nervous System agents, HIV-AIDS related drugs.
SEM4	SEC-4	Pesticide Chemistry
		CO1. To learn about the preparation, structures, properties, reactions, benefits, and adverse effects of representative pesticide of the following classes: Organochlorines, Organophosphates, Carbamates, Quinones.
Semester	Course Code [CEM-G]	Course Outcomes
SEM5	DSE(A)	Novel Inorganic Solids
		CO1. Introduces students with advanced fields of chemistry like synthetic modification of different industrially important Inorganic solids, synthesis of nano-materials, polymers, etc.
		CO2. To understand how to synthesize hydro-gel by co-precipitation method and silver and gold nanoparticles.
		CO3. Determination of ions by cation exchange method and total difference of solids in a composite material.

Semester	Course Code [CEM-G]	Course Outcomes
SEM5	DSE(A)	Inorganic Materials of Industrial Importance
		CO1. Students will learn the synthetic procedure and use of different commercially important materials like silicates, fertilizers, alloys, catalysts, surface coating materials, and batteries.
		CO2. To learn about the general principles, properties, classification, industrial use, deactivation, and regeneration of catalysis.
		CO3. To learn about the preparation and explosive properties of lead azide, PETN, RDX, and the basic idea of rocket propellant.
		CO4. The practical course helps to learn how to analyze the composition of dolomite, composition of percentage of metals in alloy, electroless metallic coatings on ceramic and plastic.
		CO5. To know how to determine free acidity in ammonium sulphate fertilizer, estimation of Calcium in Calcium ammonium nitrate fertilizer, and phosphoric acid in superphosphate fertilizer.

Semester	Course Code [CEM-G]	Course Outcomes
SEM6	DSE(B)	Green Chemistry and Chemistry of Natural Products
		CO1. Students of undergraduate course are continuously being introduced and encouraged about the different possibilities in this field. It helps students to think and perform to design and develop environmentally benign methods for organic synthesis.
		CO2. To know about the examples of green reactions and future trends in green reaction.
		CO3. To learn how to perform green synthesis of a number of organic compounds in the

COURSE & PROGRAM OUTCOMES OF MATHEMATICS HONOURS AND GENERAL (B.SC.) UNDER CBCS

Programme outcomes

PO1: Scientific temper will be developed in Students.

PO2: Students will acquire basic Practical skills & Technical knowledge along with domain knowledge of different subjects in the science stream.

PO3: Students will become employable; they will be eligible for career opportunities in Industry, or will be able to opt for entrepreneurship.

PO4: Students will possess basic subject knowledge required for higher studies, professional and applied courses like Management Studies, Law etc.

PO5: Students will be aware of and able to develop solution oriented approach towards various Social and Environmental issues.

Programme specific outcomes

PSO1: A student should be able to recall basic facts about mathematics and should be able to display knowledge of conventions such as notations, terminology.

PSO2: A student should get adequate exposure to global and local concerns that explore them many aspects of mathematical sciences.

PSO3 : Student is equipped with mathematical modeling ability, problem solving skills, creative talent and power of communication necessary for various kinds of employment.

PSO4: Student should be able to apply their skills and knowledge that is translate information presented verbally into mathematical form, select and use

MATHEMATICS HONOURS COURSE OUTCOMES

❖ Semester-1:

Core Course-1 (Unit-1: Calculus, Unit-2: Geometry & Unit-3: Vector Analysis)

Paper Code (Theory): MTM-A-CC-1-1-TH

Paper Code (Tutorial): MTM-A-CC-1-1-TU

Unit-1: Calculus

Learning Outcomes: On completion of this area of the course, the student will be able to

- Understand the nature of Hyperbolic functions.
- Find higher order derivatives and apply the Leibnitz rule to solve problems related to such derivatives.
- Plot the graphs of polynomials of degree 4 and 5, the derivative graph, the second derivative graph and compare them.
- Apply the concept and principles of differential calculus to find the curvature, concavity and points of inflection, envelopes, rectilinear asymptotes (Cartesian & parametric form only) of different curves.
- Trace standard curves in Cartesian coordinates and polar coordinates.
- Sketch parametric curves (Ex. trochoid, cycloid, epicycloids, hypocycloid).
- Apply the concept and principles of differential calculus to solve different geometric and physical problems that may arise in business, economics and life sciences.
- Solve various limit problems using L' Hospital's rule.
- Derive Reduction formulae for some complex integrations and hence Integrate functions of a much higher degree which are applicable in real life situations.
- Apply the integral calculus to find arc length of a curve, arc length of parametric curves, area under a curve, surface area and volume of surface of revolution.
- Graphically obtain the surface of revolution of curves.

Unit-2: Geometry

Learning Outcomes: On completion of this area of the course, the student will be able to

- Transform the co-ordinate system especially by Rotation of axes, thus reducing different second-degree equations to their corresponding simplest forms and also classify the conics using the discriminant.
- Become familiar with the polar equations of conics & their tangents and normals

Dr. Sasabindu Jana
Principal
RAIDIGHI COLLEGE

RAIDIGHI COLLEGE

(A NAAC Accredited College)

P.O. & P.S. -Raidighi, South 24 Parganas, Pin- 743383

Phone No. 9735340005

Website – www.raidighicollege.in

Email – principal.raidighi@gmail.com, raidighicollege95@gmail.com

- Understand the geometrical terminology and have a detailed clear-cut idea of the Planes, Straight lines in 3D, Spheres, Cylindrical surfaces, Central conicoids, Paraboloids, Plane sections of conicoids along with the Tangent and normals of the conicoids.
- Have an idea of classification of quadrics.
- Develop an idea of the generating lines.

- Be familiar with the illustrations of graphing standard quadric surfaces like cones, paraboloids, hyperboloids and ellipsoids.
- Visualize and graphically demonstrate geometric figures and classify different geometric solids using teaching aid - preferably free softwares :
 - ✓ Tracing of conics in cartesian coordinates/ polar coordinates.
 - ✓ Sketching ellipsoid, hyperboloid of one and two sheets, elliptic cone, elliptic, paraboloid, and hyperbolic paraboloid using cartesian coordinates.
- Understand the basic applications of the analytical plane and solid geometry.

Unit-3: Vector Analysis

Learning Outcomes: On completion of this area of the course, the student will be able to

- Find the Triple product of Products and their Applications
- Deduce the Vector equations subject to different conditions.
- Understand the applications of vector algebra (particularly, vector products) to geometry and mechanics — concurrent forces in a plane, theory of couples, system of parallel forces.
- Learn operations with vector-valued functions.
- Find the limits and verify continuity of vector functions.
- Differentiate and integrate vector functions of one variable.

Core Course-2 (ALGEBRA: Unit-1, 2 & 3)

Paper Code(Theory): MTM-A-CC-1-2-TH

Paper Code (Tutorial):MTM-A-CC-1-2TU

Learning Outcomes: On completion of this course, the student will have a clear-cut understanding of some important concepts of Classical Algebra, Abstract Algebra & Linear Algebra as follows:

Dr. Sasabindu Jana
Principal
RAIDIGHI COLLEGE

RAIDIGHI COLLEGE

(A NAAC Accredited College)

Phone No. 9735340005

Website – www.raidighicollege.in

Email – principal.raidighi@gmail.com, raidighicollege95@gmail.com

Unit-1

- Polar representation of complex numbers, n -th roots of unity, De Moivre's theorem for rational indices and its applications. Exponential, logarithmic, trigonometric and hyperbolic functions of the complex variable.
- Theory of equations: Relation between roots and coefficients, transformation of the equation, Descartes rule of signs, Sturm's theorem, cubic equation (solution by Cardan's method) and biquadratic equation (solution by Ferrari's method).
- Inequality: The inequality involving $AM \geq GM \geq HM$, Cauchy-Schwartz inequality. • Linear difference equations with constant coefficients (up to 2nd order).

Unit-2

- Relation: equivalence relation, equivalence classes & partition, partial order relation, poset, linear order relation.
- Mapping: injective, surjective, one to one correspondence, invertible mapping, composition of mappings, relation between the composition of mappings and various set theoretic operations. Meaning and properties of $f^{-1}(B)$, for any mapping $f: X \rightarrow Y$ and $B \subseteq Y$.
- Well-ordering property of positive integers, Principles of Mathematical induction, division algorithm, di-visibility and Euclidean algorithm. Prime numbers and their properties, Euclid's theorem. Congruence relation between integers. Fundamental Theorem of Arithmetic. Chinese remainder theorem. Arithmetic functions, some arithmetic functions such as ν , τ , σ and their properties.

Unit-3

- Rank of a matrix, inverse of a matrix, characterizations of invertible matrices.
- Systems of linear equations, row reduction and echelon forms, vector equations, the matrix equation $AX = B$, solution sets of linear systems, applications of linear systems.

❖ Semester 2:

Core Course-3 (Real Analysis: Unit-1,2,3)

Paper Code (Theory): MTM-A-CC-2-3-TH

Paper Code (Tutorial): MTM-A-CC-2-3-TU

Learning Outcomes:

After completion of this course, the students will be able to think about the basic proof techniques and fundamental definitions related to the real number system. They can demonstrate some of the fundamental theorems of analysis. The students will gradually develop Analysis skills in sets, sequences and infinite series of Real Numbers covered by the three respective units as follows:

Unit-1

- Intuitive idea of real numbers. Mathematical operations and usual order of real numbers revisited with their properties (closure, commutative, associative, identity, inverse, distributive). Idea of countable sets, un-countable sets and uncountability of \mathbb{R} . Concept of bounded and unbounded sets in \mathbb{R} . L.U.B. (supremum), G.L.B. (infimum) of a set and their properties. L.U.B. axiom or order completeness axiom. Archimedean property of \mathbb{R} . Density of rational (and Irrational) numbers in \mathbb{R} .
- Intervals. Neighbourhood of a point. Interior point. Open set. Union, intersection of open sets. Limit point and isolated point of a set. Bolzano-Weirstrass theorem for sets. Existence of limit point of every uncountable set as a consequence of Bolzano-Weirstrass theorem. Derived set. Closed set. Complement of open set and closed set. Union and intersection of closed sets as a consequence. No nonempty proper subset of \mathbb{R} is both open and closed. Dense set in \mathbb{R} as a set having non-empty intersection with every open interval.

Unit-2

- Real sequence. Bounded sequence. Convergence and non-convergence. Examples. Boundedness of convergent sequence. Uniqueness of limit. Algebra of limits.
- Relation between the limit point of a set and the limit of a convergent sequence of distinct elements. Monotone sequences and their convergence. Sandwich rule. Nested interval theorem. Limit of some important sequences. Cauchy's first and second limit theorems.
- Subsequence, Subsequential limits. A bounded sequence $\{x_n\}$ is convergent if and only if $\limsup x_n = \liminf x_n$. Every sequence has a monotone subsequence.

Dr. Sasabindu Jana

Website – www.raidighicollege.in

Email – principal.raidighi@gmail.com, raidighicollege95@gmail.com

Bolzano-Weierstrass theorem for sequence. Cauchy's convergence criterion. Cauchy sequence.

Unit-3

Infinite series, convergence and non-convergence of infinite series, Cauchy criterion, tests for convergence: comparison test, limit comparison test, ratio test, Cauchy's n -th root test, Kummer's test and Gauss test (statements only). Alternating series, Leibniz test. Absolute and conditional convergence.

Graphical Demonstration (Teaching Aid-Preferably by computer softwares)

The students will gain hands on expertise in graphical demonstration of the following, using computer software or otherwise:

- Plotting of recursive sequences.
- Study the convergence of sequences through plotting.
- Verify Bolzano-Weierstrass theorem through plotting of sequences and hence identify convergent subsequences from the plot.
- Study the convergence/divergence of infinite series by plotting their sequences of partial sum.
- Cauchy's root test by plotting n -th roots.
- Ratio test by plotting the ratio of n -th and $(n + 1)$ -th term.

Core Course-4 (Group Theory-I: Unit-1,2,3)

Paper Code (Theory): MTM-A-CC-2-4-TH

Paper Code (Tutorial): MTM-A-CC-2-4-TU

Learning Outcomes: On the completion of this course, the students will understand the basic concepts of Group Theory in Abstract/Modern Algebra covered by the following three units:

Unit-1

Symmetries of a square, definition of group, examples of groups including permutation groups, dihedral groups and quaternion groups (through matrices),

Dr. Sasabindu Jana

Website – www.raidighicollege.in

Email – principal.raidighi@gmail.com, raidighicollege95@gmail.com

elementary properties of groups, examples of commutative and non-commutative groups. Subgroups and examples of subgroups, necessary and sufficient condition for a nonempty subset of a group to be a subgroup. Normalizer, centralizer, center of a group, product of two subgroups.

Unit-2

Properties of cyclic groups, classification of subgroups of cyclic groups. Cycle notation for permutations, properties of permutations, even and odd permutations, alternating group, properties of cosets, order of an element, order of a group. Lagrange's theorem and consequences including Fermat's Little theorem.

Unit-3

Normal subgroup and its properties. Quotient group. Group homomorphisms, properties of homomorphisms, correspondence theorem and one-one correspondence between the set of all normal subgroups of a group and the set of all congruences on that group, Cayley's theorem, properties of isomorphisms. First, Second and Third isomorphism theorems.

❖ Semester 3:

Core Course-5 (Theory of Real Functions: Unit-1,2)

Paper Code (Theory): MTM-A-CC-3-5-TH

Paper Code (Tutorial): MTM-A-CC-3-5-TU

Learning Outcomes: After completion of this course, the students will be able to understand the concept of real-valued functions, limit, continuity, and differentiability in detail. They can find expansions of real functions in series forms. The students will become conversant with many of the important theorems of Differential Calculus after the completion of this Core Course which has been covered in the following two units:

Unit-1: Limit & Continuity of functions

- Limits of functions, sequential criterion for limits. Algebra of limits for functions, effect of limit on inequality involving functions, one sided limit. Infinite limits and limits at infinity. Some Important examples of limits.
- Continuity of a function on an interval and at an isolated point. Sequential criteria for continuity. Concept of oscillation of a function at a point.

A function is continuous at x if and only if its oscillation at x is zero. Familiarity

Dr. Sasabindu Jana
Principal
RAIDIGHI COLLEGE

RAIDIGHI COLLEGE

(A NAAC Accredited College)

P.O. & P.S. -Raidighi, South 24 Parganas, Pin- 743383

Phone No. 9735340005

Website – www.raidighicollege.in

Email – principal.raidighi@gmail.com, raidighicollege95@gmail.com

with the figures of some well-known functions: $y = x^a$ ($a = 2, 3, -1, -2$), $|x|$, $\sin x$, $\cos x$, $\tan x$, $\log x$, e^x . Algebra of continuous functions as a consequence of algebra of limits. Continuity of composite functions. Examples of continuous functions. Continuity of a function at a point does not necessarily imply the continuity in some neighbourhood of that point.

- Bounded functions. Neighbourhood properties of continuous functions regarding boundedness and maintenance of the same sign. Continuous function on $[a, b]$ is bounded and attains its bounds. Intermediate value theorem.
- Discontinuity of functions, type of discontinuity. Step functions. Piecewise continuity. Monotone functions. Monotone functions can have only jump discontinuity. Monotone functions can have at most countably many points of discontinuity. Monotone bijective function from an interval to an interval is continuous and its inverse is also continuous.
- Uniform continuity. Functions continuous on a closed and bounded interval is uniformly continuous. A necessary and sufficient condition under which a continuous function on a bounded open interval will be uniformly continuous. A sufficient condition under which a continuous function on an unbounded open interval will be uniformly continuous (statement only). Lipschitz condition and uniform continuity.

Unit-2: Differentiability of functions

- Differentiability of a function at a point and in an interval, algebra of differentiable functions. Meaning of sign of derivative. Chain rule.
- Darboux theorem, Rolle's theorem, Mean value theorems of Lagrange and Cauchy — as an application of Rolle's theorem. Taylor's theorem on closed and bounded interval with Lagrange's and Cauchy's form of remainder deduced from Lagrange's and Cauchy's mean value theorem respectively. Expansion of e^x , $\log(1+x)$, $(1+x)^m$, $\sin x$, $\cos x$ with their range of validity (assuming relevant theorems). Application of Taylor's theorem to inequalities.
- Statement of L'Hospital's rule and its consequences. Point of local extremum (maximum, minimum) of a function in an interval. Sufficient condition for the existence of a local maximum/minimum of a function at a point (statement only). Determination of local extremum using first order derivative. Application of the principle of maximum/minimum in geometrical problems.

Core Course-6: Ring Theory & Linear Algebra-I

Paper Code (Theory): MTM-A-CC-3-6-TH

Paper Code (Tutorial): MTM-A-CC-3-6-TU

Learning Outcomes:

After completion of this course, the students will mainly be able to

- Develop a concept on Ring Theory of Abstract Algebra in details.
- Understand vector spaces over a field and subspaces and apply their properties.
- Understand linear independence and dependence.
- Find the basis and dimension of a vector space, and understand the change of basis.
- Compute linear transformations, kernel and range, and inverse linear transformations, and find matrices of general linear transformations.
- Find eigenvalues and eigenvectors of a matrix and of linear transformation.
- The Cayley-Hamilton Theorem and its use in finding the inverse of a matrix
- Understand various concepts of Abstract & Linear Algebra covered in details by the following units:

Unit-1: Ring theory

Definition and examples of rings, properties of rings, subrings, necessary and sufficient condition for a nonempty subset of a ring to be a subring, integral domains and fields, subfield, necessary and sufficient condition for a nonempty subset of a field to be a subfield, characteristic of a ring. Ideal, ideal generated by a subset of a ring, factor rings, operations on ideals, prime and maximal ideals. Ring homomorphisms, properties of ring homomorphisms. First isomorphism theorem, second isomorphism theorem, third isomorphism theorem, Correspondence theorem, congruence on rings, one-one correspondence between the set of ideals and the set of all congruences on a ring.

Unit-2: Linear algebra-I

- Vector spaces, subspaces, algebra of subspaces, quotient spaces, linear

combination of vectors, linear span, linear independence, basis and dimension, dimension of subspaces. Subspaces of \mathbb{R}^n , dimension of subspaces of \mathbb{R}^n . Geometric significance of subspace.

- Linear transformations, null space, range, rank and nullity of a linear transformation, matrix representation of a linear transformation, change of coordinate matrix. Algebra of linear transformations. Isomorphisms. Isomorphism theorems, invertibility and isomorphisms. Eigen values, eigen vectors and characteristic equation of a matrix. Cayley-Hamilton theorem and its use in finding the inverse of a matrix.

Core Course-7: Ordinary Differential Equation & Multivariate Calculus-I

Paper Code (Theory): MTM-A-CC-3-7-TH

Paper Code (Tutorial): MTM-A-CC-3-7-TU

Unit-1: Ordinary differential equation

Learning Outcomes:

On completion of this course, the student will be able to identify the type of a given differential equation and select and apply the appropriate analytical technique for finding the solution. The students will be well conversant with the following types of differential equations:

- First order differential equations: Exact differential equations and integrating factors, special integrating factors and transformations, linear equations and Bernoulli equations, the existence and uniqueness theorem of Picard (Statement only).
- Linear equations and equations reducible to linear form. First order higher degree equations solvable for x , y and p . Clairaut's equations and singular solution.
- Basic Theory of linear systems in normal form, homogeneous linear systems with constant coefficients: Two Equations in two unknown functions.
- Linear differential equations of second order, Wronskian: its properties and applications, Euler equation, method of undetermined coefficients, method of variation of parameters.
- System of linear differential equations, types of linear systems, differential operators, an operator method for linear systems with constant

coefficients.

- Planar linear autonomous systems: Equilibrium (critical) points, Interpretation of the phase plane and phase portraits.
- Power series solution of a differential equation about an ordinary point, solution about a regular singular point (up to second order).

Unit-2: Multivariate Calculus-I

Learning Outcomes:

On completion of this course, the student will be able to

- Understand the concept of neighbourhood of a point in R^n ($n > 1$), interior point, limit point, open set and closed set in R^n ($n > 1$).
- Identify functions from R^n ($n > 1$) to R^m ($m \geq 1$)
- Develop concepts on limit and continuity of functions of two or more variables, their partial derivatives, total derivative and differentiability, along with the sufficient condition for differentiability, Chain rule for one and two independent parameters, directional derivatives, the gradient, maximal and normal property of the gradient, tangent planes.
- Find Extrema of functions of two variables & understand the use of the method of Lagrange multipliers & solve constrained optimization problems.

❖ Semester 4:

Core Course-8 (Riemann Integration & Series of Function: Unit-1,2,3)

Paper Code (Theory): MTM-A-CC-4-8-TH

Paper Code (Tutorial): MTM-A-CC-4-8-TU

Unit-1: Riemann integration

Learning Outcomes:

On completion of this unit of the course, the student will be able to

- Understand Partition and refinement of partition of a closed and bounded interval.
- Conceptualise Upper Darboux sum $U(P, f)$ and lower Darboux sum $L(P, f)$ and associated results. Upper integral and lower integral.
- Understand Darboux's theorem along with Darboux's definition of

- integration over a closed and bounded interval.
- Learn Riemann's definition of integrability and its Equivalence with Darboux definition of integrability along with the Necessary and sufficient condition for Riemann integrability.
 - Conceptualize negligible set (or zero set) defined as a set covered by countable number of open intervals sum of whose lengths is arbitrary small, Examples of negligible sets: any subset of a negligible set, finite set, countable union of negligible sets.
 - Learn that a bounded function on a closed and bounded interval is Riemann integrable if and only if the set of points of discontinuity is negligible.

Dr. Sasabindu Jana
Principal
RAIDIGHI COLLEGE

- Develop the capacity to integrate, while understanding the examples of Riemann integrable functions.
- Develop the concept of Integrability of sum, scalar multiple, product, quotient, modulus of Riemann integrable functions & properties of Riemann integrable functions arising from the above results.
- Have an idea of the functions defined by definite integral and its properties, Antiderivative (primitive or indefinite integral) and also the properties of Logarithmic function defined as the definite integral.
- Understand the Fundamental theorem of Integral Calculus & First Mean Value theorem of integral calculus.

Unit-2: Improper integral

Learning Outcomes:

On completion of this unit of the course, the student will be able to

- Understand well the Range of integration-finite or infinite and learn the Necessary and sufficient condition for convergence of improper integral in both cases.
- Learn the Tests of convergence: Comparison and M-test, Absolute and non-absolute convergence and inter-relations.
- Understand the Statement of Abel's and Dirichlet's test for convergence on the integral of a product.
- Develop an idea of convergence and working knowledge of Beta and Gamma and their interrelation.
- Compute different integrals when they exist (using Beta and Gamma function).

Unit-3: Series of functions

Learning Outcomes:

On completion of this unit of the course, the student will be able to develop a clear-cut idea on sequence and series of functions defined on a set after covering the following:

- Sequence of functions defined on a set, Pointwise and uniform convergence. Cauchy criterion of uniform convergence. Weierstrass' M-test. Boundedness, continuity, integrability and differentiability of the limit function of a sequence of functions in case of uniform convergence.
- Series of functions defined on a set, Pointwise and uniform convergence. Cauchy criterion of uniform convergence. Weierstrass' M-test. Passage to the limit term by term. Boundedness, continuity, integrability, differentiability of a series of functions in case of uniform convergence.

Core Course-9 (Partial differential equation & Multivariate Calculus-II)

Paper Code(Theory): MTM-A-CC-4-9-TH

Paper Code (Tutorial):MTM-A-CC-4-9-TU

Unit-1: Partial differential equation

Learning Outcomes:

On completion of this unit of the course, the student will be able to understand, derive and solve different types of partial differential equations which may arise in real life problems:

- Partial differential equations of the first order, Lagrange's solution, non-linear first order partial differential equations, Charpit's general method of solution, some special types of equations which can be solved easily by methods other than the general method.
- Derivation of heat equation, wave equation and Laplace equation. Classification of second order linear equations as hyperbolic, parabolic or elliptic. Reduction of second order linear equations to canonical forms.
- The Cauchy problem, Cauchy-Kowalewskaya theorem, Cauchy problem of finite and infinite string. Initial boundary value problems. Semi-infinite string with a fixed end, semi-infinite string with a free end. Equations with non-homogeneous boundary conditions. Non-homogeneous wave equation. Method of separation of variables, solving the vibrating string problem. Solving the heat conduction problem.

Unit-2: Multivariate Calculus-II

Learning Outcomes:

After completion of this unit of the course which covers the following topics on multiple integrals, line integrals etc., the student will be able to apply these concepts to solve many real-life problems that may arise in different fields:

- Multiple integral: Concept of upper sum, lower sum, upper integral, lower-integral and double integral (no rigorous treatment is needed). Statement of existence theorem for continuous functions. Iterated or repeated integral, change of order of integration. Triple integral. Cylindrical and spherical coordinates. Change of variables in double integrals and triple integrals. Transformation of double and

triple inte-grals (problems only). Determination of volume and surface area by multiple integrals (problems only). Differentiation under the integral sign, Leibniz's rule (problems only).

- Definition of vector field, divergence and curl. Line integrals, applications of line integral: mass and work. Fundamental theorem for line integrals, conservative vector fields, independence of path.
- Green's theorem, surface integrals, integrals over parametrically defined surfaces. Stoke's theorem, The Divergence theorem.

Core Course-10 (Mechanics)

Paper Code (Theory): MTM-A-CC-4-10-TH

Paper Code (Tutorial): MTM-A-CC-4-10-TU

Learning Outcomes: After completion of this course, the students will be able to learn and explain different concepts on Mechanics including Statics covered by the following units:

Unit-1

- Coplanar forces in general: Resultant force and resultant couple, Special cases, Varignon's theorem, Necessary and sufficient conditions of equilibrium. Equilibrium equations of the first, second and third kind.
- An arbitrary force system in space: Moment of a force about an axis, Varignon's theorem. Resultant force and resultant couple, necessary and sufficient conditions of equilibrium. Equilibrium equations, Reduction to a wrench, Poinso't's central axis, intensity and pitch of a wrench, Invariants of a system of forces. Statically determinate and indeterminate problems.
- Equilibrium in the presence of sliding Friction force: Contact force between bodies, Coulomb's laws of static Friction and dynamic friction. The angle and cone of friction, the equilibrium region.

Unit-2

- Virtual work: Workless constraints - examples, virtual displacements and virtual work. The principle of virtual work, Deductions of the necessary and sufficient conditions of equilibrium of an arbitrary force system in plane and space, acting on a rigid body.
- Stability of equilibrium: Conservative force field, energy test of stability, condition of stability of a perfectly rough heavy body lying on a fixed body. Rocking stones.

Unit-3

- Kinematics of a particle: velocity, acceleration, angular velocity, linear and angular momentum. Relative velocity and acceleration. Expressions for velocity and acceleration in case of rectilinear motion and planar motion - in Cartesian and polar coordinates, tangential and normal components. Uniform circular motion.
- Newton laws of motion and law of gravitation: Space, time, mass,

force, inertial reference frame, principle of equivalence and g. Vector equation of motion.

Work, power, kinetic energy, conservative forces - potential energy. Existence of potential energy function. Energy conservation in a conservative field. Stable equilibrium and small oscillations: Approximate equation of motion for small oscillation. Impulsive forces

Unit-4

- Problems in particle dynamics: Rectilinear motion in a given force field - vertical motion under uniform gravity, inverse square field, constrained rectilinear motion, vertical motion under gravity in a resisting medium, simple harmonic motion, Damped and forced oscillations, resonance of an oscillating system, motion of elastic strings and springs.
- Planar motion of a particle: Motion of a projectile in a resisting medium under gravity, orbits in a central force field, Stability of nearly circular orbits. Motion under the attractive inverse square law, Kepler's laws of planetary motion. Slightly disturbed orbits, motion of artificial satellites. Constrained motion of a particle on smooth and rough curves. Equations of motion referred to a set of rotating axes.
- Motion of a particle in three dimensions: Motion on a smooth sphere, cone, and on any surface of revolution.

Unit-5 (Many particles system)

- The linear momentum principle: Linear momentum, linear momentum principle, motion of the centre of mass, conservation of linear momentum.
- The angular momentum principle: Moment of a force about a point, about an axis. Angular momentum about a point, about an axis. Angular momentum principle about centre of mass. Conservation of angular momentum (about a point and an axis). Impulsive forces.
- The energy principle: Configurations and degrees of freedom of a multi-particle system, energy principle, energy conservation.
- Rocket motion in free space and under gravity, collision of elastic bodies. The two-body problem.

❖ Semester 5:

Core Course-11 (Probability & Statistics)

Paper Code (Theory): MTM-A-CC-5-11-TH

Paper Code (Tutorial): MTM-A-CC-5-11-TU

Learning Outcomes: After completion of this course, the students will be able to understand & apply the concepts of probability & statistics covered in the following Units:

Unit-1

- Random experiment, σ -field, Sample space, probability as a set function, probability axioms, probability space. Finite sample spaces. Conditional probability, Bayes theorem, independence. Real random variables (discrete and continuous), cumulative distribution function,

probability mass/density functions, mathematical expectation, moments, moment generating function, characteristic function. Discrete distributions: uniform, binomial, Poisson, geometric, negative binomial, Continuous distributions: uniform, normal, exponential.

Unit-2

- Joint cumulative distribution function and its properties, joint probability density functions, marginal and conditional distributions, expectation of function of two random variables, moments, covariance, correlation coefficient, independent random variables, joint moment generating function (jmgf) and calculation of covariance from jmgf, characteristic function. Conditional expectations, linear regression for two variables, regression curves. Bivariate normal distribution.

Unit-3

- Markov and Chebyshev's inequality, Convergence in Probability, statement and interpretation of weak law of large numbers and strong law of large numbers. Central limit theorem for independent and identically distributed random variables with finite variance.

Unit-4

- Sampling and Sampling Distributions: Populations and Samples, Random Sample, distribution of the sample, Simple random sampling with

and without replacement. Sample characteristics. Sampling Distributions: Statistic, Sample moments. Sample variance, Sampling from the normal distributions, Chi-square, t and F -distributions and some other sampling distributions Estimation of parameters: Point estimation. Interval

Estimation-Confidence Intervals for mean and variance of Normal Population. Mean-squared error. Properties of good estimators - unbiasedness, consistency, sufficiency, Minimum-Variance Unbiased Estimator (MVUE).

- Method of Maximum likelihood: likelihood function, ML estimators for discrete and continuous models.

Unit-5

- Statistical hypothesis: Simple and composite hypotheses, null hypotheses, alternative hypotheses, one-sided and two-sided hypotheses. The critical region and test statistic, type I error and type II error, level of significance. Power function of a test, most powerful test. The p -value (observed level of significance), Calculating p -values.
- Simple hypothesis versus simple alternative: Neyman-Pearson lemma (Statement only).
- Bivariate frequency Distribution: Bivariate data, Scatter diagram, Correlation, Linear Regression, principle of least squares and fitting of polynomials and exponential curves.

Graphical Demonstration (Teaching Aid Preferably by free softwares (e.g. R/ Python / SageMath etc.) but can be taught through black board/white board / square sheet etc. in case of unavailability.)

- Graphical representation of data - how to load data, plot a graph viz. histograms (equal class intervals and unequal class intervals), frequency polygon, pie chart, gives graphical summaries of data.
- Measures of central tendency and measures of dispersion, moments, skewness and kurtosis.
- Karl Pearson correlation coefficient.
- Correlation coefficient for a bivariate frequency distribution.
- Lines of regression, angle between lines and estimated values of variables.

Core Course-12 (Group Theory-II & Linear Algebra-II)

Paper Code(Theory): MTM-A-CC-5-12-TH

Paper Code (Tutorial):MTM-A-CC-5-12-TU

Learning Outcomes: After completion of this course, the students will be able to demonstrate the mathematical maturity of understanding the advance aspects of Group Theory and Linear Algebra

Unit-1: Group theory

- Automorphism, inner automorphism, automorphism groups, automorphism groups of finite and infinite cyclic groups, applications of factor groups to automorphism groups.
- External direct product and its properties, the group of units modulo n as an external direct product, internal direct product, converse of Lagrange's theorem for finite abelian group, Cauchy's theorem for finite abelian group, Fundamental theorem of finite abelian groups.

Unit-2: Linear algebra

- Inner product spaces and norms, Gram-Schmidt orthonormalization process, orthogonal complements, Bessel's inequality, the adjoint of a linear operator and its basic properties.
- Bilinear and quadratic forms, Diagonalization of symmetric matrices, Second derivative test for critical point of a function of several variables, Hessian matrix, Sylvester's law of inertia. Index, signature.
- Dual spaces, dual basis, double dual, transpose of a linear transformation and its matrix in the dual basis, annihilators. Eigenspaces of a linear operator, diagonalizability, invariant subspaces and Cayley-Hamilton theorem, the minimal polynomial for a linear operator, canonical forms (Jordan & rational).

❖ Semester 6:

Core Course-13 (Metric Space & Complex Analysis)

Paper Code (Theory): MTM-A-CC-6-13-TH

Paper Code (Tutorial): MTM-A-CC-6-13-TU

Unit-1: Metric space

Learning Outcomes: On successful completion of the course students will be able to develop conceptual understanding of the following:

Dr. Sasabindu Jana
Principal
RAIDIGHI COLLEGE

RAIDIGHI COLLEGE

(A NAAC Accredited College)

Phone No. 9735340005

Website – www.raidighicollege.in

Email – principal.raidighi@gmail.com, raidighicollege95@gmail.com

- Definition and examples of metric spaces. Open ball. Open set. Closed set as complement of open set. Interior point and interior of a set. Limit point and closure of a set. Boundary point and boundary of a set. Properties of interior, closure and boundary. Bounded set and diameter of a set. Distance between two sets. Subspace of a metric space.
- Convergent sequence. Cauchy sequence. Every convergent sequence is Cauchy and bounded, but the converse is not true. Completeness. Cantor's intersection theorem. \mathbb{R} is a complete metric space. \mathbb{Q} is not complete.
- Continuous mappings, sequential criterion of continuity. Uniform continuity.
- Compactness, Sequential compactness, Heine-Borel theorem in \mathbb{R} . Finite intersection property, continuous functions on compact sets.
- Concept of connectedness and some examples of connected metric space, connected subsets of \mathbb{R} , \mathbb{C} .
- Contraction mappings, Banach Fixed point Theorem and its application to ordinary differential equations.

Unit-2: Complex analysis

Learning Outcomes: After completion of this course, the students will be able to demonstrate understanding of the basic concepts and fundamental definitions underlying complex analysis. They can prove and explain concepts of series and integration of complex functions and clearly understand problem-solving using complex analysis techniques after covering the following topics:

- Stereographic projection. Regions in the complex plane. Limits, limits involving the point at infinity. Continuity of functions of complex variables.
- Derivatives, differentiation formulas, Cauchy-Riemann equations, sufficient conditions for differentiability. Analytic functions, exponential function, logarithmic function, trigonometric functions, hyperbolic functions. Möbius transformation.
- Power series: Cauchy-Hadamard theorem. Determination of radius of convergence. Uniform and absolute convergence of power series.

Analytic functions represented by power series. Uniqueness of power series.

- Contours, complex integration along a contour and its examples, upper bounds for moduli of contour integrals. Cauchy- Goursat theorem (statement only) and its consequences, Cauchy integral formula.

Core Course-14 (Numerical Methods)

Paper Code (Theory): MTM-A-CC-6-14-TH

Learning Outcomes: After completion of this course, the students will be able to:

- Apply numerical methods to obtain approximate solutions to mathematical problems.
- Solve the nonlinear equations, system of linear equations and interpolation problems using numerical methods.
- Examine the appropriate numerical differentiation and integration methods to solve problems.

- Apply the numerical methods to solve algebraic as well as differentialequations. The course will be covered in the following units:

Unit-1

- Representation of real numbers, Machine Numbers - floatingpoint and fixed point. Sources of Errors, Rounding of numbers, significant digits and Error Propagation in machine arithmetic operations. Numerical Algorithms - stability and convergence.

Unit-2

- Approximation: Classes of approximating functions, Types of approximations- polynomial approximation, The Weierstrass polynomial approximation theorem (statement only).
- Interpolation: Lagrange and Newton's methods. Error bounds. Finite difference operators. Newton (Gregory) forward and backward difference interpolation.
- Central Interpolation: Stirling's and Bessel's formulas. Different interpolation zones, Error estimation. Hermite interpolation.

Unit-3

- Numerical differentiation: Methods based on interpolations; methods based on finite differences.
- Numerical Integration: Newton Cotes formula, Trapezoidal rule,

Simpson's 1/3-rd rule, Simpson's 3/8-th rule, Weddle's rule, Boole's Rule, midpoint rule. Composite trapezoidal rule, composite Simpson's 1/3-rd rule, composite Weddle's rule. Gaussian quadrature formula.

Unit-4

- Transcendental and polynomial equations: Bisection method, Secant method, Regula-falsi method, fixed point iteration, Newton-Raphson method. Condition of convergence (if any), Order of convergence, Rate of convergence of these methods. Modified Newton-Raphson method for multiple roots, Complex roots of an algebraic equation by Newton-Raphson method. Numerical solution of a system of nonlinear equations - Newton's method.

Unit-5

System of linear algebraic equations:

- Direct methods: Gaussian elimination and Gauss Jordan methods, Pivoting strategies.
- Iterative methods: Gauss Jacobi method, Gauss Seidel method and their convergence analysis. LU decomposition method (Crout's LU decomposition method).
- Matrix inversion: Gaussian elimination and LU decomposition method (Crout's LU decomposition method) (operational counts).
- The algebraic eigen value problem: Power method.

Unit-6

- Ordinary differential equations: Single-step difference equation methods- error, convergence. The method of successive approximations (Picard), Euler's method, the modified Euler method, Runge-Kutta methods of orders two and four.

Core Course-14 Practical (Numerical Methods Lab)

Paper Code (Practical): MTM-A-CC-6-14-P

Learning Outcomes: For any of the CAS (Computer aided software), students are introduced to Data types-simple data

types, floating data types, character data types, arithmetic operators and operator precedence, variables and constant declarations, expressions, input/output, relational operators, logical operators and logical expressions, control statements and loop statements, Arrays. The students become expert in solving different numerical problems (listed below) by using computer programming techniques of *C/ C++/ FORTRAN 90*

- Calculate the sum $1 + \frac{1}{2} + \frac{1}{3} + \dots + \frac{1}{N}$
- Enter 100 integers into an array and sort them in an ascending order.
- Solution of transcendental and algebraic equations by
 - i) Bisection method
 - ii) Newton Raphson method (Simple root, multiple roots, complex roots).
 - iii) Secant method.
 - iv) Regula Falsi method.
- Solution of system of linear equations
 - i) LU decomposition method
 - ii) Gaussian elimination method
 - iii) Gauss-Jacobi method
 - iv) Gauss-Seidel method
- Interpolation
 - i) Lagrange Interpolation
 - ii) Newton's forward, backward and divided difference interpolations
- Numerical Integration
 - i) Trapezoidal Rule
 - ii) Simpson's one third rule
 - iii) Weddle's Rule
 - iv) Gauss Quadrature
- Method of finding Eigenvalue by Power method (up to 4×4)
- Fitting a Polynomial Function (up to third degree)

- Solution of ordinary differential equations
 - i) Euler method
 - ii) Modified Euler method
 - iii) Runge Kutta method (order 4)
 - iv) The method of successive approximations (Picard)

Skill Enhancement Courses-SEC (Semester-3 & 4)

Learning Outcomes:

After the completion of these courses the students will acquire skills in thinking more logically in Mathematics, as well as they will understand the importance of C programming or object-oriented programming C++, both of which are very good programming tools for solving many real-life problems. The students can also acquire the skill of scientific computing using the software SageMath / R. The students will be introduced to the fundamental commands and structure of Sage Math/R. The course covers the basic syntax and semantics of SageMath & R, including basic data types, variables, control structures and functions or similar concepts, and visualization of results and processed data.

The course will be covered in the following:

C Programming Language (Semester-3)

Paper Code (Theory) : MTM-A-SEC-A-TH

- An overview of theoretical computers, history of computers, overview of architecture of computer, compiler, assembler, machine language, high level language, object oriented language, programming language and importance of C programming.
- Constants, Variables and Data type of C-Program : Character set. Constants and variables data types, expression, assignment statements, declaration.
- Operation and Expressions : Arithmetic operators, relational operators, logical operators.
- Decision Making and Branching : decision making with if statement, if-else statement, Nesting if statement, switch statement, break and continue statement.
- Control Statements : While statement, do-while statement, for statement.
- Arrays : One-dimension, two-dimension and multidimensional arrays, declaration of arrays, initialization of one and multi-dimensional arrays.
- User-defined Functions : Definition of functions, Scope of variables, return values and their types, function declaration, function call by value, Nesting of functions, passing of

arrays to functions, Recurrence of function.

- Introduction to Library functions: stdio.h, math.h, string.h, stdlib.h, time.h etc.

Or Object Oriented Programming in C++ (Semester-3)

Paper Code(Theory): MTM-A-SEC-A-TH

Unit-1

• Programming paradigms, characteristics of object oriented programming languages, brief history of C++, structure of C++ program, differences between C and C++, basic C++ operators, Comments, working with variables, enumeration, arrays and pointer.

Unit-2

• Objects, classes, constructor and destructors, friend function, inline function, encapsulation, data abstraction, inheritance, polymorphism, dynamic binding, operator overloading, method overloading, overloading arithmetic operator and comparison operators.

Unit-3

• Template class in C++, copy constructor, subscript and function call operator, concept of namespace and exception handling.

• List of hands on examples (using C++)

1. Calculate the sum $1/1 + 1/2 + 1/3 + \dots + 1/N$
2. Enter 100 integers into an array and sort them in an ascending order.
3. HCF and LCM of three positive integers.
4. Separate even and odd numbers from first N natural numbers.
5. Find all the prime numbers between 1 and N (N being a positive integer).
6. Find the binary representation of a decimal number (up to 3 digits).
7. Addition, subtraction, multiplication of two matrices (order up to 4×4).
8. Compute the value of the determinant of a square matrix (order up to 4×4).

Mathematical Logic (Semester-4)

Paper Code (Theory): MTM-A-SEC-B-TH

Unit-1

• Introduction, propositions, truth table, negation, conjunction and disjunction. Implications,

Email – principal.raidighi@gmail.com, raidighicollege95@gmail.com

Unit-2

• Propositional Logic : Formal theory for propositional calculus, derivation, proof, theorem, deduction theorem, conjunctive and disjunctive normal forms, semantics, truth tables, tautology, adequate set of connectives, applications to switching circuits, logical consequence, consistency, maximal consistency, Leindenbaum lemma, soundness and completeness theorems, algebraic semantics.

Unit-3

• Predicate Logic : First order language, symbolizing ordinary sentences into first order formulae, free and bound variables, interpretation and satisfiability, models, logical validity, formal theory for predicate calculus, theorems and derivations, deduction theorem, equivalence theorem, replacement theorem, choice rule, Prenex normal form, soundness theorem, completeness theorem, compactness theorem, First Order Theory with equality, examples of First Order Theories (groups, rings, fields etc.).

Or Scientific computing with SageMath & R (Semester-4)

Paper Code (Theory): MTM-A-SEC-B-TH

- Introduction to SageMath and R , Installation Procedure, Use of SageMath & R as a Calculator, Numerical and symbolic computations using mathematical functions such as square root, trigonometric functions, logarithms, exponentiations etc.
- Graphical representations of few functions through plotting in a given interval, like plotting of polynomial functions, trigonometric functions, Plots of functions with asymptotes, superimposing multiple graphs in one plot like plotting a curve along with a tangent on that curve (if it exists), polar plotting of curves.
- SageMath & R commands for differentiation, higher order derivatives, plotting $f(x)$ and $f'(x)$ together, integrals, definite integrals etc.
- Introduction to Programming in SageMath & R , relational and logical operators, conditional statements, loops and nested loops, without using inbuilt functions write programs for average of integers, mean, median, mode, factorial, checking primes, checking next primes, finding all primes in an interval, finding gcd, lcm, finding convergence of a given sequence, etc.
- Use of inbuilt functions that deal with matrices, determinant, inverse of a given real square matrix (if it exists), solving a system of linear equations, finding roots of a given polynomial, solving differential equations.

Discipline Specific Electives (DSE): (Semester 5 & 6)

For Semester -5	For Semester -5	For Semester-6	For Semester-6
Advanced Algebra	Discrete Mathematics	Differential Geometry	Point Set Topology
Bio Mathematics	Linear Programming & Game Theory	Mathematical Modelling	Astronomy & Space Science
Industrial Mathematics	Boolean Algebra & Automata Theory	Fluid Statics & Elementary Fluid Dynamics	Advanced Mechanics

A student has to opt for any one of the subjects in DSE-A(1) and any one in DSE-B(1) in Semester 5. The student has to opt for any one of the subjects in DSE-A(2) and any one in DSE-B(2) in Semester 6.

Advanced Algebra

Paper Code(Theory):MTM-A-DSE-A-5-1-TH

Paper Code(Tutorial):MTM-A-DSE-A-5-1-TU

Learning Outcomes

Upon successful completion, students will have the knowledge and skills to:

On satisfying the requirements of this course, students will have the knowledge and skills to:

1. Explain the fundamental concepts of advanced algebra such as groups and rings and their role in modern mathematics and applied contexts
2. Demonstrate accurate and efficient use of advanced algebraic techniques
3. Demonstrate capacity for mathematical reasoning through analyzing, proving and explaining concepts from advanced algebra
4. Apply problem-solving using advanced algebraic techniques applied to diverse situations in physics, engineering and other mathematical contexts

The course will be covered in the following units:

Unit-1: Group Theory

- Group actions, stabilizers, permutation representation associated with a given group action, Applications of group actions: Generalized Cayley's theorem, Index theorem.
- Groups acting on themselves by conjugation, class equation and consequences, conjugacy in S_n , p-groups, Sylow's theorems and consequences, Cauchy's theorem, Simplicity of A_n for $n \geq 5$

5, non-simplicity tests.

Unit-2: Ring Theory

- Principal ideal domain, principal ideal ring, prime element, irreducible element, greatest common divisor (gcd), least common multiple (lcm), expression of gcd, examples of a ring R and a pair of elements $a, b \in R$ such that $\gcd(a, b)$ does not exist, Euclidean domain, relation between Euclidean domain and principal ideal domain.
- Polynomial rings, division algorithm and consequences, factorization domain, unique factorization domain, irreducible and prime elements in a unique factorization domain, relation between principal ideal domain, unique factorization domain, factorization domain and integral domain, Eisenstein criterion and unique factorization in $\mathbb{Z}[x]$.
- Ring embedding and quotient field, regular rings and their examples, properties of regular ring, ideals in regular rings.

Bio Mathematics

Paper Code(Theory):MTM-A-DSE-A-5-1-TH

Paper Code(Tutorial):MTM-A-DSE-A-5-1-TU

Learning Outcomes

By the end of this course, students will be able to:

- Gain an improved understanding of mathematical models as they are used in biology.
- Derive and interpret the results of models of population growth, species interactions, demography, natural selection, and disease dynamics.
 - Determine the behaviour of a dynamical system using a combination of mathematical approaches and simulations.
 - Gain an introductory understanding of matrix theory and probability theory.
- Use a mathematical software package to analyse and simulate equations describing biological phenomena.
- Practise translating a biological question into a mathematical model and analysing the equations using a student-developed model.

The course will be covered in the following units:

Dr. Sasabindu Jana
Principal
RAIDIGHI COLLEGE

RAIDIGHI COLLEGE

(A NAAC Accredited College)

P.O. & P.S. -Raidighi, South 24 Parganas, Pin- 743383

Phone No. 9735340005

Website – www.raidighicollege.in

Email – principal.raidighi@gmail.com, raidighicollege95@gmail.com

Unit-1

- Mathematical biology and the modeling process: an overview. Continuous models: Malthus model, logistic growth, Allee effect, Gompertz growth, Michaelis-Menten Kinetics, Holling type growth, bacterial growth in a chemostat, harvesting a single natural population, Prey predator systems and Lotka-Volterra equations, populations in competitions, epidemic models (SI, SIR, SIRS, SIC)

Unit-2

- Activator-inhibitor system, insect outbreak model: Spruce Budworm. Numerical solution of the models and its graphical representation. Qualitative analysis of continuous models: Steady state solutions, stability and linearization, multiple species communities and Routh-Hurwitz Criteria. Phase plane methods and qualitative solutions, bifurcations and limit cycles with examples in the context of biological scenario. Spatial models: One species model with diffusion. Two species model with diffusion, conditions for diffusive instability, spreading colonies of microorganisms, Blood flow in circulatory system, travelling wave solutions, spread of genes in a population.

Unit-3

- Discrete models : Overview of difference equations, steady state solution and linear stability analysis. Introduction to discrete models, linear models, growth models, decay models, drug delivery problem, discrete prey-predator models, density dependent growth models with harvesting, host-parasitoid systems (Nicholson- Bailey model), numerical solution of the models and its graphical representation. case studies.

Optimal exploitation models, models in genetics, stage structure models, age structure models.

Graphical Demonstration (Teaching Aid)[using any software]

- Growth model (exponential case only).
- Decay model (exponential case only).
- Lake pollution model (with constant/seasonal flow and pollution concentration).
- Case of single cold pill and a course of cold pills.
- Limited growth of population (with and without harvesting).
- Predatory-prey model (basic Volterra model, with density dependence, effect of DDT, two prey one predator).
- Epidemic model of influenza (basic epidemic model, contagious for life, disease with carriers).
- Battle model (basic battle model, jungle warfare, long range weapons).

Email – principal.raidighi@gmail.com, raidighicollege95@gmail.com

By the end of the module, students should be able to:

- Understand the difference between forward problems and inverse problem
- Derive the loss functional for specific applications
- Apply the direct method to establish the existence of solutions of regularised inverse problems
- Understand the principles of image formation, including the basic principles and the components of X-ray imaging and CT, MRI, USG, CR, DR and Nuclear medicine imaging

The course will be covered in the following units:

Unit-1

• Medical Imaging and Inverse Problems. The content is based on Mathematics of X-ray and CT scan based on the knowledge of calculus, elementary differential equations, complex numbers and matrices.

Unit-2

• Introduction to Inverse problems: Why should we teach Inverse Problems? Illustration of Inverse problems through problems taught in Pre-Calculus, Calculus, Matrices and differential equations. Geological anomalies in Earth are interior from measurements at its surface (Inverse problems for Natural disaster) and Tomography.

Unit-3

• X-ray: Introduction, X-ray behavior and Beers Law (The fundamental question of image construction) Lines in the place

Unit-4

• Radon Transform: Definition and Examples, Linearity, Phantom (Shepp - Logan Phantom – Mathematical phantoms).

Unit-5

• Back Projection: Definition, properties and examples.

Unit-6

• CT Scan: Revision of properties of Fourier and inverse Fourier transforms and applications of their properties in image reconstruction. Algorithms of CT scan machine. Algebraic reconstruction techniques abbreviated as ART with application to CT scan.

Learning Outcomes

After completing the course, the students will be able to

- Understand and explore the basics of graph theory.
- Analyse the significance of graph theory in different engineering disciplines
- Demonstrate algorithms used in interdisciplinary engineering domains.
- Evaluate or synthesize any real world applications using graph theory.
- The students should be able to define the main concepts related to primality, divisibility, congruences, and number-theoretic functions. The students should be able to formulate main results proved in the course, in particular, the Euclidean Algorithm, Euclid's Lemma, the Chinese Remainder Theorem, Fermat's Little Theorem, Euler's Theorem, and the Quadratic Reciprocity Law.
- Solve many different problems related to the material covered. Understand how Number Theory plays an important role in Cryptography

The course will be covered in the following units:

Unit-1 : Graph Theory

- Definition of undirected graphs, Using of graphs to solve different puzzles and problems. Multigraphs. Walks, Trails, Paths, Circuits and cycles, Eulerian circuits and paths. Eulerian graphs, example of Eulerian graphs. Hamiltonian cycles and Hamiltonian graphs.
- Weighted graphs and Travelling salespersons Problem. Dijkstra's algorithm to find shortest path.
- Definition of Trees and their elementary properties. Definition of Planar graphs, Kuratowski's graphs.
- Partial Order relations and lattices, Chains and antichains. Pigeon hole Principle.

Unit-2 : Number Theory

- Application of techniques of groups and rings to prove some theorems in number theory : Fermat's Theorem, Euler's Theorem, Willson's Theorem, Chinese Remainder Theorem.
- The Arithmetic of Z_p , p a prime, pseudo prime and Carmichael Numbers, Fermat Numbers, Perfect Numbers, Mersenne Numbers.
- Primitive roots, the group of units Z_n , the existence of primitive roots, applications of primitive roots, the algebraic structure of Z_n .
- Quadratic residues and non quadratic residues, Legendre symbol, proof of the law of quadratic reciprocity, Jacobi symbols.

- Arithmetic functions, Multiplicative functions, definitions and examples.

Linear Programming & Game Theory

Learning Outcomes

On completion of the course, a student will be able to

- (a) analyse and solve linear programming models of real life situations;
- (b) provide graphical solutions of linear programming problems with two variables, and illustrate the concept of convex set and extreme points;
- (c) apply the simplex method to solve LPP's;
- (d) describe the relationships between the primal and dual problems;
- (e) describe the applications of transportation, assignment and two-person zero-sum game problems.

The course will be covered in the following units:

Unit-1

- Definition of Linear Programming Problem (L.P.P.). Formation of L.P.P. from daily life involving inequations. Graphical solution of L.P.P. Basic solutions and Basic Feasible Solution (B.F.S) with reference to L.P.P. Matrix formulation of L.P.P. Degenerate and Non-degenerate B.F.S.
- Hyperplane, Convex set, Cone, extreme points, convex hull and convex polyhedron. Supporting and Separating hyperplane. The collection of a feasible solutions of an L.P.P. constitutes a convex set. The extreme points of the convex set of feasible solutions correspond to its B.F.S. and conversely. The objective function has its optimal value at an extreme point of the convex polyhedron generated by the set of feasible solutions (the convex polyhedron may also be unbounded). In the absence of degeneracy, if the L.P.P. admits of an optimal solution then at least one B.F.S. must be optimal. Reduction of a F.S. to a B.F.S.

Unit-2

- Slack and surplus variables. Standard form of L.P.P. theory of simplex method. Feasibility and optimality conditions.
- The algorithm. Two phase method. Degeneracy in L.P.P. and its resolution.

Unit-3

- Duality theory: The dual of dual is the primal. Relation between the objective values of dual and the primal problems. Relation between their optimal values. Complementary slackness, Duality and simplex method and their applications.

Unit-4

- Transportation and Assignment problems. Mathematical justification for optimality criterion. Hungarian method. Traveling Salesman problem.
- Concept of game problem. Rectangular games. Pure strategy and Mixed strategy. Saddle point and its existence. Optimal strategy and value of the game. Necessary and sufficient condition for

Boolean Algebra & Automata Theory

Paper Code(Theory):MTM-A-DSE-B-5-1-TH

Paper Code(Tutorial):MTM-A-DSE-B-5-1-TU

Learning Outcomes

On completion of the course, a student will be able to

- convert numbers into different systems and perform arithmetic operations there;
- identify various methods for representing characters in a computer;
- design circuits for simple Boolean expressions, and implement basic logic gates using universal gates; (d) define Automata;
- discuss the acceptability of a string by finite automation;
- construct non-deterministic finite state machine.

The course will be covered in the following units:

Unit-1

• Definition, examples and basic properties of ordered sets, maps between ordered sets, duality principle, lattices as ordered sets, lattices as algebraic structures, sublattices, products and homomorphisms.

Unit-2

• Definition, examples and properties of modular and distributive lattices, Boolean algebras, Boolean polynomials, minimal and maximal forms of Boolean polynomials, Quinn-McCluskey method, Karnaugh diagrams, Logic gates, switching circuits and applications of switching circuits.

Unit-3

• Introduction : Alphabets, strings, and languages. Finite automata and regular languages: deterministic and non-deterministic finite automata, regular expressions, regular languages and their relationship with finite automata, pumping lemma and closure properties of regular languages.

Unit-4

• Context free grammars and pushdown automata : Context free grammars (CFG), parse trees, ambiguities in grammars and languages, pushdown automaton (PDA) and the language accepted by PDA, deterministic PDA, Non-deterministic PDA, properties of context free languages; normal forms, pumping lemma, closure properties, decision properties.

Unit-5

• Turing Machines : Turing machine as a model of computation, programming with a Turing machine, variants of Turing machine and their equivalence.

Unit-6

• Undecidability : Recursively enumerable and recursive languages, undecidable problems about

Differential Geometry

Paper Code(Theory):MTM-A-DSE-A-6-2-TH

Paper Code(Tutorial):MTM-A-DSE-A-6-2-TU

Learning Outcomes

On

completion of the course, a student will be able to

- describe various properties of curves including Serret-Frenet formulae and their applications;
- describe the interpretation of the curvature tensor, Geodesic curvature, Gauss and Weingarten formulae;
- describe the role of Gauss's Theorem a Egregium and its consequences;
- apply problem-solving with differential geometry to diverse situations in physics, engineering and in other mathematical contexts.

The course will be covered in the following units:

Unit-1

• Tensor : Different transformation laws, Properties of tensors, Metric tensor, Riemannian space, Covariant ,Differentiation, Einstein space.

Unit-2

• Theory of space curves : Space curves. Planer curves, curvature, torsion and Serret-Frenet formula. Osculating circles, osculating circles and spheres. Existence of space curves. Evolutes and involutes of curves.

• Theory of surfaces : Parametric curves on surfaces. Direction coefficients. First and second Fundamental forms. Principal and Gaussian curvatures. Lines of curvature, Euler's theorem. Rodrigue's formula. Conjugate and asymptotic lines.

Unit-3

• Developables : Developable associated with space curves and curves on surfaces. Minimal surfaces. Geodesics: Canonical geodesic equations. Nature of geodesics on a surface of revolution. Clairaut's theorem. Normal property of geodesics. Torsion of a geodesic. Geodesic curvature. Gauss-Bonnet theorem.

Mathematical Modelling

Paper Code(Theory):MTM-A-DSE-A-6-2-TH

Paper Code(Tutorial):MTM-A-DSE-A-6-2-TU

Learning Outcomes

By the end of the course, students will be able to:

- to handle freely the concepts using in mathematical modeling;
- to analyze a simple physical phenomena in order to create a mathematical model;
- Apply mathematical strategies and techniques to solve real-world problems.
- Develop and use computer software for mathematical modelling.

The course will be covered in the following units:

Unit-1

• Power series solution of Bessel's equation and Legendre's equation, Laplace transform and inverse transform, application to initial value problem up to second order.

Unit-2

• Monte Carlo simulation modelling: simulating deterministic behavior (area under a curve, volume under a surface), generating random numbers: middle square method, linear congruence, queuing models: harbor system, morning rush hour, Overview of optimization modelling. Linear programming model: geometric solution algebraic solution, simplex method, sensitivity analysis

Fluid Statics & Elementary Fluid Dynamics

Paper Code(Theory):MTM-A-DSE-A-6-2-TH

Paper Code(Tutorial):MTM-A-DSE-A-6-2-TU

Learning Outcomes

By the end of the course, students will be able to:

- solve hydrostatic problems.
- describe the motion of fluids.
- identify derivation of basic equations of fluid mechanics and apply

The course will be covered in the following units:

Unit-1

• Introduction and Fundamental Concepts:

Definition of Fluid, Distinction Between Solid and Fluid, Concept of Continuum, Fluid Properties : Density, Specific Weight, Specific Volume, Specific Gravity. Stress field [(Normal stress: $\sigma_n = \lim_{\Delta n \rightarrow 0} (\Delta F_n / \Delta A_n)$ and Shear stress: $\tau_n = \lim_{\Delta n \rightarrow 0} (\Delta F_t / \Delta A_n)$], Viscosity, Vapor pressure, Newtonian fluid, Non-Newtonian Fluids. Ideal Fluid, Compressibility, Distinction between an Incompressible and a Compressible Flow, Surface Tension of Liquids.

Forces on Fluid Elements: Definition of Fluid Elements, Body Force, Surface Force, Normal Stress in a Stationary Fluid, Pascal's Law of Hydrostatics, Fundamental Equation of Fluid Statics: $\frac{dp}{dz} = -\rho g$, Fundamental Fluid Static Equations in Scalar Form: $\frac{dp}{dz} = -\rho g$, Constant Density Solution.

Unit-2

• Hydrostatics

Hydrostatic Thrusts on Submerged Plane Surface: Centre of pressure, determination of coordinates of centre of pressure. Hydrostatic Thrusts on Submerged Curved Surfaces. Buoyancy: Center of the buoyancy.

Archimedes principle. Stability of Unconstrained Submerged Bodies in Fluid: Stable Equilibrium, Unstable Equilibrium, Neutral Equilibrium. Stability of Floating Bodies in Fluid:

Metacentre, Metacentric height.

- **Gas**

Pressure of gases, The Atmosphere, Relation between pressure, density and temperature, Pressure in an isothermal atmosphere, Atmosphere in convective equilibrium.

Unit-3

- **Kinematics of Fluid:**

Scalar and Vector Fields, flow field, Description of Fluid Motion: Lagrangian Method, Eulerian Method, Relation between Eulerian and Lagrangian Method, Variation of Flow Parameters in Time and Space: Steady and Unsteady Flow, Uniform and Non-uniform Flows. Material Derivative and Acceleration: temporal derivative, convective derivative

Unit-4

- **Conservation Equations:**

Control Mass System, Control Volume System, Isolated System. Conservation of Mass - The Continuity Equation: Differential Form and Vector Form, Integral form. Conservation of Momentum: Momentum Theorem, Reynolds Transport Theorem. Conservation of energy.

Point Set Topology

Paper Code(Theory):MTM-A-DSE-B-6-2-TH

Paper Code(Tutorial):MTM-A-DSE-B-6-2-TU

On completion of the course, a student will be able to

- (a) demonstrate knowledge and understanding of concepts such as open and closed sets, interior, closure and boundary;
- (b) create new topological spaces by using subspace, product and quotient topologies;
- (c) use continuous functions and homeomorphisms to describe the structure of a topological space;
- (d) develop idea about and different definitions of compactness.
- (e) develop idea about connectedness, path-connectedness.

The course will be covered in the following units:

Unit-1

- Topological spaces, basis and subbasis for a topology, neighbourhoods of a point, interior points, limit points, derived set, boundary of a set, closed sets, closure and interior of a set, dense subsets, subspace topology, finite Product topology, Continuous functions, open maps, closed maps, homeomorphisms, topological invariants, metric topology, isometry and metric invariants.

Unit-2

- First countability, T_1 and T_2 separation axioms of topological spaces, convergence and cluster point of a sequence in topological spaces and some related concepts on first countable as well as on T_2 spaces. Heine's continuity criterion.

Unit-3

- Connected spaces, connected sets in \mathbb{R} , components, Compact spaces, compactness and T_2 , compact sets in \mathbb{R} , Heine-Borel Theorem for \mathbb{R}^n , real valued continuous function on connected and compact spaces, the concept of compactness in metric space, sequentially compactness of a metric space X and the Bolzano- Weiertrass property of X are equivalent.

Astronomy & Space Science

Paper Code(Theory):MTM-A-DSE-B-6-2-TH

Paper Code(Tutorial):MTM-A-DSE-B-6-2-TU

Upon successful completion, students will have the knowledge and skills to:

1. Appreciate and communicate traditional Indigenous understandings of astronomy.
2. Apply astronomical research techniques and the scientific method to conceptually solve astronomical puzzles.
3. Understand and communicate the nature and origins of the Sun, stars and our solar system.
4. Identify and communicate the ways in which space technology can and will affect the modern and future world.

The course will be covered in the following units:

Unit-1

- Celestial Sphere, various Coordinate Systems, transformation formulae among various coordinate systems, formulae of spherical triangle : cosine formula, sine formula, four parts formula , analogous cosine formula, hour angle, sidereal day, sidereal time, equation of time. Exercises.

Unit-2

- Light and its properties, Optical , absorption, emission and continuous spectra, radio and Hubble Space Telescopes (HST), Photometry, Spectrometry, Spectrophotometry (definitions only), magnification, resolution, f/a ratio , refractors and reflectors. Exercises.

Unit-3

- Various magnitudes of stars: apparent, absolute, photovisual, photographic, bolometric etc. Distance measurements of stars: Parallax method, Statistical Palallax Method, Moving Cluster Method. Radial and proper motion. Exercises.
- Morphological structure of Sun, solar cycles, sunspots, solar corona, solar wind, solar neutrino

puzzle (Merely descriptive models). Solar system.

Unit-4

- Interstellar matter, elastic collisions and kinetic equilibrium, Jeans Mass for gravitational collapse, radiative process (statement only).

Unit-5

- Morphological classification of galaxies, rotation curves and mass modelling, missing mass and dark matter, distance determination by various methods. Our Galaxy. Exercises.

Unit-6

- Space agencies around the world – The history of space agencies – Indian space exploration – First missions – Remarkable achievements.
- Rocket Propulsion; Rocket Equation and Staging, Optimal Rocket. Element of Aerodynamics; Aerodynamics Force and Moment, Fluid dynamics (Governing equations: Interpretations and Statements only), Flow regime, Continuum Flow, Continuum Viscous Flow and Boundary Layer, Rarefied Flow. Airbreathing Propulsion; Ideal Momentum Theory, Propeller Engine, Jet Engine.

Advanced Mechanics

Paper Code(Theory):MTM-A-DSE-B-6-2-TH

Paper Code(Tutorial):MTM-A-DSE-B-6-2-TU

On completion of the course, a student will be able to

- (a) describe necessary conditions for the equilibrium of particles acted upon by various forces and learn the principle of virtual work for a system of coplanar forces acting on a rigid body;

Dr. Sasabindu Jana

- (b) determine the centre of gravity of some materialistic systems and discuss the equilibrium of a uniform cable hanging freely under its own weight;
- (c) solve problems about the kinematics and kinetics of the rectilinear and planar motions of a particle including the constrained oscillatory motions of particles;
- (d) learn that a particle moving under a central force describes a plane curve and know the Kepler's laws of the planetary motions.

The course will be covered in the following units:

Unit-1

• Degrees of freedom, reactions due to constraints. D' Alembert's principle; Lagrange's first kind equations; Generalized coordinates; Generalized forces; Lagrangian; Second kind Lagrange's equations of motion; cyclic coordinates; velocity dependent potential; Principle of energy; Rayleigh's dissipation function.

Unit-2

• Action Integral; Hamilton's principle; Lagrange's equations by variational methods; Hamilton's principle for non-holonomic system; Symmetry properties and conservation laws; Noether's theorem. Canonically conjugate coordinates and momenta; Legendre transformation; Routhian approach; Hamiltonian.

Unit-3

• Hamilton's equations from variational principle; Poincare-Cartan integral invariant; Principle of stationary action; Fermat's principle;

Unit-4

• Canonical transformation; Generating function; Poisson Bracket; Equations of motion; Action-angle variables; Hamilton-Jacobi's equation; Hamilton's principal function; Hamilton's characteristics function; Liouville's theorem.

Course Outcomes of Mathematics Generic Elective B.A. & B.Sc under CBCS

[For students having Honours in subjects other than Mathematics]

❖ First Semester:

Core Course-1 / Generic Elective-1 (Unit-1,2,3,4)

Paper Code (Theoretical) : MTM-G-CC-1-1-TH /MTM-G-GE-1-1-TH

Paper Code (Tutorial): MTM-G-CC-1-1-TU /MTM-G-GE-1-1-TU

Unit-1 : Algebra-I

Learning Outcomes: On completion of this course, the student will have understanding of some important concepts of Classical Algebra & Linear follows:

- Complex Numbers : De Moivre's Theorem and its applications. Sine, Cosine and Logarithm of a complex number. Definition of Inverse circular and Hyperbolic functions.
- Polynomials : Fundamental Theorem of Algebra (Statement only). with real coefficients, the n -th degree polynomial equation has exact Nature of roots of an equation (surd or complex roots occur in pairs of Descartes' rule of signs and its applications.
- Statements of : (i) If a polynomial $f(x)$ has opposite signs for two a and b of x , the equation $f(x) = 0$ has an odd number of real roots between a and b . If $f(a)$ and $f(b)$ are of the same sign, either no real root or an even number of real roots lies between a and b .
(ii) Rolle's Theorem and its direct applications.
- Relation between roots and coefficients, symmetric functions transformations of equations. Cardan's method of solution of a cubic
- Rank of a matrix : Determination of rank either by considering minors or by using row and column operations. Consistency and solution of a system of linear equations with more than 3 variables by matrix method.

Unit-2 : Differential Calculus-I

Learning Outcomes: On completion of this area of the course, the student will be

able to develop a clear concept of the following:

- Rational numbers, Geometrical representations, Irrational number, Real number represented as point on a line — Linear Continuum. Acquaintance with basic properties of real number (No deduction or proof is included).

- Real-valued functions defined on an interval, limit of a function (Cauchy's definition). Algebra of limits. Continuity of a function at a point and in an interval. Acquaintance (on proof) with the important properties of continuous functions on closed intervals. Statement of existence of inverse function of a strictly monotone function and its continuity.

- Derivative-its geometrical and physical interpretation. Sign of derivative- Monotonic increasing and decreasing functions. Relation between continuity and derivability. Differential - application in finding approximation.

- Successive derivative - Leibnitz's theorem and its application.

- Functions of two and three variables : their geometrical representations. Limit and Continuity (definitions only) for function of two variables. Partial derivatives. Knowledge and use of chain Rule. Exact differentials (emphasis on solving problems only). Functions of two variables - Successive partial Derivatives : Statement of Schwarz's Theorem on Commutative property of mixed derivatives. Euler's Theorem on homogeneous function of two and three variables.

- Applications of Differential Calculus : Curvature of plane curves. Rectilinear Asymptotes (Cartesian only). Envelope of a family of straight lines and of curves

(problems only). Definitions and examples of singular points (Viz. Node. Cusp, Isolated point).

Unit-3 : Differential Equation-I

problems:

- Order, degree and solution of an ordinary differential equation (ODE) in presence of arbitrary constants, Formation of ODE.
- First order equations : (i) Exact equations and those reducible to such equation.

Unit-4 : Coordinate Geometry

Learning Outcomes: After completion of this part of the course, the students will be able to understand the basic applications of coordinate geometry.

- Transformations of Rectangular axes : Translation, Rotation and their combinations. Invariants.
- General equation of second degree in x and y : Reduction to canonical forms. Classification of conic.
- Pair of straight lines : Condition that the general equation of 2nd degree in x and y may represent two straight lines. Point of intersection of two intersecting straight lines. Angle between two lines given by $ax^2 + 2hxy + by^2 = 0$. Equation of bisectors. Equation of two lines joining the origin to the points in which a line meets a conic.
- Equations of pair of tangents from an external point, chord of contact, poles and polars in case of General conic : Particular cases for Parabola, Ellipse, Circle, Hyperbola.
- Polar equation of straight lines and circles. Polar equation of a conic referred to a focus as pole. Equation of chord joining two points. Equations of tangent and normal.
- Sphere and its tangent plane. Right circular cone.

❖ Second Semester

Core Course-2 / Generic Elective-2 (Unit-1,2,3,4)

Paper Code (Theoretical) : MTM-G-CC-2-2-TH /MTM-G-GE-2-2-TH

Paper Code (Tutorial):MTM-G-CC-2-2-TU /MTM-G-GE-2-2-TU

Unit-1 : Differential Calculus-II

Learning Outcomes: On completion of the course, the student will be able to apply the concept and principles of differential calculus to solve geometric and physical problems.

- Sequence of real numbers : Definition of bounds of a sequence and

Cauchy's general principle of convergence and its application.

- Infinite series of constant terms; Convergence and Divergence (definitions). Cauchy's principle as applied to infinite series (application only). Series of positive terms: Statements of comparison test. D'Alembert's Ratio test. Cauchy's n th root test and Raabe's test Applications. Alternating series. Statement of Leibnitz test and its applications.
- Real-Valued functions defined on an interval: Statement of Rolle's Theorem and its geometrical interpretation. Mean value theorems of Lagrange and Cauchy. Statements of Taylor's and Maclaurin's Theorems with Lagrange's and Cauchy's form of remainders. Taylor's and Maclaurin's Infinite series of functions like e^x , $\sin x$, $\cos x$, $(1+x)^n$, $\log(1+x)$ with restrictions wherever necessary.
- Indeterminate Forms : L'Hospital's Rule : Statement and Problems only.
- Application of the principle of Maxima and Minima for a function of a single variable in geometrical, physical and to other problems.
- Maxima and minima of functions of not more than three variables Lagrange's Method of undetermined multiplier - Problems only.

Unit-2 : Differential Equation-II

Learning Outcomes: On completion of this course, the student will be able to identify the type of a given ordinary as well as partial differential equation and select and apply the appropriate analytical technique for finding the solution.

- Linear homogeneous equations with constant coefficients, Linear non-homogeneous equations, The method of variation of parameters, The Cauchy-Euler equation, Simultaneous differential equations, Simple eigen-value problem.
- Order and degree of partial differential equations, Concept of linear and non-linear partial differential equations, Formation of first order partial differential equations, Linear partial differential equation of first order, Lagrange's method, Charpit's method.

- Addition of Vectors, Multiplication of a Vector by a Scalar. Collinear and Coplanar Vectors. Scalar and Vector products of two and three vectors. Simple applications to problems of Geometry. Vector equation of plane and straight line. Volume of Tetrahedron. Applications to problems of Mechanics (Work done and Moment).

Unit-4 : Discrete Mathematics

Learning Outcomes: On successful completion of the course students will be able to develop conceptual understanding of

- Integers : Principle of Mathematical Induction. Division algorithm. Representation of integers in an arbitrary base. Prime Integers. Some properties of prime integers. Fundamental theorem of Arithmetic. Euclid's Theorem. Linear Diophantine equations. Statement of Principle of Mathematical Induction, Strong form of Mathematical induction. Applications in different problems. Proofs of division algorithm. Representation of an integer uniquely in an arbitrary base, change of an integer from one base to another base. Computer operations with integers, Divisor of an integer, g.c.d. of two positive integers, prime integer, Proof of Fundamental theorem, Proof of Euclid's Theorem. To show how to find all prime numbers less than or equal to a given positive integer. Problems related to prime number. Linear Diophantine equation & some applications.
- Congruences : Congruence relation on integers, Basic properties of this relation. Linear congruences, Chinese Remainder Theorem. System of Linear congruences. Definition of Congruence, to show it is an equivalence relation, to prove some of its properties. Linear Congruence, to show how to solve these congruences, Chinese remainder theorem Statement and proof and some applications. System of linear congruences, when solution exists with some applications.
- Application of Congruences : Divisibility tests. Check-digit and an ISBN, in Universal product Code, in major credit cards. Error detecting capability. Using Congruence, develop divisibility tests for integers based on their expansions with respect to different bases, Show that congruence can be used to schedule Round-Robin tournaments. Check digits for different identification numbers such as International standard book number, universal product code etc. Theorem regarding error detecting capability.

existence of inverse. Fermat's little theorem. Euler's theorem. Wilson's theorem - Statement, proof and some applications.

- Boolean algebra : Boolean Algebra, Boolean functions, Logic gates, Minimization of circuits.

❖ Third Semester:

Core Course-3 / Generic Elective-3 (Unit-1,2,3)

Paper Code (Theoretical) : MTM-G-CC-3-3-TH/MTM-G-GE-3-3-TH

Paper Code (Tutorial): MTM-G-CC-3-3-TU /MTM-G-GE-3-3-TU

Unit-1 : Integral Calculus

Learning Outcomes: On completion of the following topics of the course in this unit, the student will be able to apply the concept and various principles of integral calculus to integrate the functions which are applicable in real life situations:

- Evaluation of definite integrals.
- Integration as the limit of a sum (with equally spaced as well as unequal intervals).
- Reduction formulae for integrals.
- Definition of Improper Integrals : Statements of (i) μ -test (ii) Comparison test - Simple problems only. Use of Beta and Gamma functions (convergence and important relations being assumed).
- Working knowledge of double integral.
- Applications : Rectification, Quadrature, volume and surface areas of solids formed by revolution of plane curve and areas problems only.

Unit-2 : Numerical Methods

Learning Outcomes: After completion of this unit of the course, the students will be able to apply numerical methods to obtain approximate solutions to various mathematical problems. The student will get an overall idea of

- Approximate numbers, Significant figures, Rounding off numbers. Error : Absolute, Relative and percent-age.

Formula, remainder term (expression only). Newton's Backward interpolation Formula (Statement only) with remainder term. Unequally-spaced arguments Lagrange's Interpolation Formula (Statement only). Numerical problems on Interpolation with both equally and unequally spaced arguments.

- Numerical Integration : Trapezoidal and Simpson's one-third formula (statement only). Problems on Numerical Integration.
- Solution of Numerical Equation : To find a real root of an algebraic or transcendental equation. Location of root (tabular method), Bisection method, Newton-Raphson method with geometrical significance, Numerical Problems. (Note : Emphasis should be given on problems)

Unit-3 : Linear Programming

Learning Outcomes: After completion of this unit of the course, the students will be able to Formulate the LPP, Conceptualize the feasible region, Solve the LPP using different methods & understand the importance of LPP in daily life. In details, the student will be able to understand and visualize the

- Motivation of Linear Programming problem. Statement of L.P.P. Formulation of L.P.P. Slack and Surplus variables. L.P.P. is matrix form. Convex set, Hyperplane, Extreme points, convex Polyhedron, Basic solutions and Basic Feasible Solutions (B.F.S.). Degenerate and Non-degenerate B.F.S.
- The set of all feasible solutions of an L.P.P. is a convex set. The objective function of an L.P.P. assumes its optimal value at an extreme point of the convex set of feasible solutions, A.B.F.S. to an L.P.P. corresponds to an extreme point of the convex set of feasible solutions.
- Fundamental Theorem of L.P.P. (Statement only) Reduction of a feasible solution to a B.F.S. Standard form of an L.P.P. Solution by graphical method (for two variables), by simplex method and method of penalty. Concept of Duality. Duality Theory. The dual of the dual is the primal. Relation between the objective values of dual and the primal problems. Dual problems with at most one unrestricted variable, one

❖ Fourth Semester:

Core Course-4 / Generic Elective-4 (Unit-1,2,3)

Paper Code (Theoretical) : MTM-G-CC-4-4-TH /MTM-G-GE-4-4-TH

Paper Code (Tutorial):MTM-G-CC-4-4-TU /MTM-G-GE-4-4-TU

Unit-1 : Algebra-II (20 Marks)

Learning Outcomes: After completion of this unit of the course, the students will be able to demonstrate the mathematical maturity of understanding a group, a ring and a field in Abstract Algebra. In Linear Algebra, the students will understand vector spaces over a field and subspaces and apply their properties. Students will get an overall understanding of the following concepts:

- Introduction of Group Theory : Definition and examples taken from various branches (example from number system, roots of Unity, 2×2 real matrices, non singular real matrices of a fixed order). Elementary properties using definition of Group. Definition and examples of sub- group - Statement of necessary and sufficient condition and its applications.
- Definitions and examples of (i) Ring, (ii) Field, (iii) Sub-ring, (iv) Sub- field.
- Concept of Vector space over a Field : Examples, Concepts of Linear combinations, Linear dependence and independence of a finite number of vectors, Sub- space, Concepts of generators and basis of a finite- dimensional vector space. Problems on formation of basis of a vector space (No proof required).
- Real Quadratic Form involving not more than three variables (problems only).
- Characteristic equation of square matrix of order not more than three. Determination of Eigen Values and Eigen Vectors (problems only). Statement and illustration of Cayley-Hamilton Theorem.

Unit-2 : Computer Science & Programming Learning Outcomes:

After completing this unit, the students will have a practical

outlook and understanding of the computers, use computers in their daily life for better efficiency, represent their knowledge with the help of the computers and various programming languages.

Students will learn the basic concepts of computer science from the following:

- Computer Science and Programming : Historical Development, Computer Generation, Computer Anatomy Different Components of a computer system. Operating System, hardware and Software.
- Positional Number System. Binary to Decimal and Decimal to Binary. Other systems. Binary Arithmetic. Octal, Hexadecimal, etc. Storing of data in a Computer - BIT, BYTE, WORD etc. Coding of a data- ASCII, etc.
- Programming Language : Machine language, Assembly language and High level language, Compiler and interpreter. Object Programme and source Programme. Ideas about some HLL- e.g. BASIC, FORTRAN, C, C++, COBOL, PASCAL, etc.
- Algorithms and Flow Charts- their utilities and important features, Ideas about the complexities of an algorithm. Application in simple problems. FORTRAN 77/90: Introduction, Data Type- Keywords, Constants and Variables - Integer, Real, Complex, Logical, character, subscripted variables, Fortran Expressions.

Unit-3 : Probability & Statistics

Learning Outcomes: On completion of this unit of the course, the student will be able to understand basic probability axioms and rules as well as different statistical methods for solving and analyzing different types of real-life problems. The students will be able to develop a clear-cut idea in the following:

- Elements of probability Theory : Random experiment,

Skill Enhancement Courses in Mathematics (SEC)

Skill Enhancement Course (Semester 3)-SEC A C Programming Language

Skill Enhancement Course (Semester 4)-SEC B Mathematical Logic

Skill Enhancement Course (Semester 5) -SEC A Object Oriented Programming in C++

Skill Enhancement Course (Semester 6)-SEC B Boolean Algebra

C Programming Language

Paper Code (Theory) : MTM-G-SEC-A-TH

Course Learning Outcomes:

- 1) To provide complete knowledge of C language
- 2) To develop logic which will be helpful to create programs
- 3) To learn basic programming constructs
- 4) After the completion of this course, the students will be able to develop applications.

The course will be covered in the following:

Unit-1

- An overview of theoretical computers, history of computers, overview of architecture of computer, compiler, assembler, machine language, high level language, object oriented language, programming language and importance of C programming.
- Constants, Variables and Data type of C-Program : Character set. Constants and variables data types, expression, assignment statements, declaration.

- Operation and Expressions : Arithmetic operators, relational operators, logical operators.
- Decision Making and Branching : decision making with if statement, if-else statement, Nesting if statement, switch statement, break and continue statement.
- Control Statements : While statement, do-while statement, for statement.
- Arrays : One-dimension, two-dimension and multidimensional arrays, declaration of arrays, initialization of one and multi-dimensional arrays.
- User-defined Functions : Definition of functions, Scope of variables, return values and their types, function declaration, function call by value, Nesting of functions, passing of arrays to functions, Recurrence of function.

Mathematical Logic

Paper Code (Theory) :MTM-G-SEC-B-TH

Course Learning Outcomes:

- Recognize Aristotelian logics, tautology, absurdity, contingency, propositional calculus.
- Prove the deduction theorem for propositional calculus - Completeness and consistency of propositional calculus
- Provide a link between logic and set theory and then provide some related questions with table.
- Describe First-order theorems - Consistency of first order predicate calculus - Completeness theorem for predicate logic. The normal and canonical form of the propositions.
- The students will explain and interpret a general knowledge of mathematical logics
- Enable students to analyse the mathematical problems.
- Ability to understand and analyze the mathematical problems

The course will be covered in the following:

Unit-1

- Introduction, propositions, truth table, negation, conjunction and disjunction. Implications, biconditional propositions, converse, contra positive and inverse propositions and precedence of logical operators.
- General Notions : Formal language, object and meta language, general definition of a Formal Theory/Formal Logic.

Unit-2

- Propositional Logic : Formal theory for propositional calculus, derivation, proof, theorem, deduction theorem, conjunctive and disjunctive normal forms, semantics, truth tables, tautology, adequate set of connectives, applications to switching circuits, logical consequence, consistency, maximal consistency, Leindenbaum lemma, soundness and completeness theorems, algebraic semantics.

Object Oriented Programming in C++ Paper Code (Theory): MTM-G-SEC-A-TH

Course Learning Outcomes:

After completing this course, you will be able to:

- Describe OOPs concepts
- Use functions and pointers in your C++ program
- Understand tokens, expressions, and control structures
- Explain arrays and strings and create programs using them
- Describe and use constructors and destructors
- Understand and employ file management
- Demonstrate how to control errors with exception handling

The course will be covered in the following:

Unit-1

• Programming paradigms, characteristics of object oriented programming languages, brief history of C++, structure of C++ program, differences between C and C++, basic C++ operators, Comments, working with variables, enumeration, arrays and pointer.

Unit-2

• Objects, classes, constructor and destructors, friend function, inline function, encapsulation, data abstraction, inheritance, polymorphism, dynamic binding, operator overloading, method overloading, overloading arithmetic operator and comparison operators.

Unit-3

• Template class in C++, copy constructor, subscript and function call operator, concept of namespace and exception handling.

Boolean Algebra

Paper Code (Theory) : MTM-G-SEC-B-TH

Course Learning Outcomes:

On completion of the course, a student will be able to

- (a) convert numbers into different systems and perform arithmetic operations there;
- (b) identify various methods for representing characters in a computer;
- (c) design circuits for simple Boolean expressions, and implement basic logic gates using universal gates;

The course will be covered in the following:

• Definition, examples and basic properties of ordered sets, maps between ordered sets, duality principle, maximal and minimal elements, lattices as ordered sets, complete lattices, lattices as algebraic structures, sublattices, products and homomorphisms. Definition, examples and

Discipline Specific Electives DSE-A & B (Mathematics)

DSE-A: (Semesters 5/6)	DSE-B: (Semesters 5/6)
Particle Dynamics	Advanced Calculus
Graph Theory	Mathematical Finance

A student has to opt for at least one of the subjects available under each category

Particle Dynamics

Paper Code (Theory): MTM-G-DSE-A-TH

Paper Code (Tutorial) MTM-G-DSE-A-TU

Course Learning Outcomes:

After studying this course, you should be able to:

- understand and use basic terms for the description of the motion of particles, vector functions and the fundamental laws of Newtonian mechanics
- solve mechanics problems in one dimension that involve one or more of the forces of gravity, friction and air resistance
- understand the concept of terminal speed, and use it in solving mechanics problems in one dimension
- apply Newton's second law in vector form to problems in more than one dimension
- solve problems relating to the motion of a projectile in the absence of air resistance.

The course will be covered in the following:

- Velocity and Acceleration of a particle. Expressions for velocity and acceleration in rectangular Cartesian and polar co-ordinates for a particle moving in a plane. Tangential and normal components of velocity and acceleration of a particle moving along a plane curve.
- Concept of Force : Statement and explanation of Newton's laws of motion. Work, power and energy. Principles of conservation of energy and momentum. Motion under impulsive forces. Equations of motion of a particle (i) moving in a straight line, (ii) moving in a plane.
- Study of motion of a particle in a straight line under (i) constant forces, (ii) variable forces (S.H.M., Inverse square law, Damped oscillation, Forced and Damped oscillation, Motion in an elastic string). Equation of Energy. Conservative forces.
- Motion in two dimensions : Projectiles in vacuum and in a medium with resistance varying linearly as velocity. Motion under forces varying as distance from a fixed point.
- Central orbit. Kepler's laws of motion. Motion under inverse square law.

Graph Theory

Paper Code (Theory): MTM-G-DSE-A-TH

Paper Code (Tutorial): MTM-G-DSE-A-TU

Course Learning Outcomes:

At the end of the course students will be able to

1. Construct examples for different types of graphs
2. Observe and generalise certain properties of given collection of graphs
3. Apply appropriate theories, principles and concepts relevant to graph theory
4. Analyse the planarity and colouring of a given graph
5. Construct appropriate matrices corresponding to a given graph and use them in identifying certain properties of the graph

The course will be covered in the following:

Unit-1

- Definition, examples and basic properties of graphs, pseudographs, complete graphs, bi-partite graphs, isomorphism of graphs
- Paths and circuits, Eulerian circuits, Hamiltonian cycles, the adjacency matrix, weighted graph, travelling salesman's problem, shortest path, Dijkstra's algorithm, Floyd-Warshall algorithm.
- Definition of Trees and their elementary properties. Definition of Planar graphs, Kuratowski's graphs

Advanced Calculus

Paper Code (Theory): MTM-G-DSE-B-TH

Paper Code (Tutorial) MTM-G-DSE-B-TU

Course Learning Outcomes:

This course will enable the students to learn :

- 1) Students will be able to know the use of Laplace transform in system modeling, digital signal processing, process control.
- 2) Solve an initial value problem for an nth order ordinary differential equation using the

Laplace transform.

3) Find the Fourier series representation of a function of one variable.

The course will be covered in the following:

- Concept of Point-wise and Uniform convergence of sequence of functions and series of functions with special reference of Power Series. Statement of Weierstrass M-Test for Uniform convergence of sequence of functions and of series of functions. Simple applications. Statement of important properties like boundedness, continuity, differentiability and integrability of the limit function of uniformly convergent sequence of functions and of the sum function of uniformly convergent series of functions. Determination of Radius of convergence of Power Series. Statement of properties of continuity of sum function power series. Term by term integration and Term by term differentiation of Power Series. Statements of Abel's Theorems on Power Series. Convergence of Power Series. Expansions of elementary functions such as e^x , $\sin x$, $\log(1+x)$, $(1+x)^n$. Simple problems.

- Periodic Fourier series on $(-\infty, \infty)$: Periodic function. Determination of Fourier coefficients. Statement of Dirichlet's conditions of convergence and statement of the theorem on convergence of Fourier Sine and Cosine series.

- Laplace Transform and its application to ordinary differential equation. Laplace Transform and Inverse Laplace Transform. Statement of Existence theorem. Elementary properties of Laplace Transform and its Inverse. Application to the solution of ordinary differential equation of second order with constant coefficients.

Mathematical Finance

Paper Code (Theory): MTM-G-DSE-B-TH

Paper Code (Tutorial) MTM-G-DSE-B-TU

Course Learning Outcomes:

The course will enable the students to;

- 1) Describe and explain the fundamental features of financial instruments.
- 2) Demonstrate a clear understanding of financial research planning, methodology and implementation.
- 3) Demonstrate understanding of basic concepts in linear algebra, relating to linear equations, matrices and optimization.
- 4) Demonstrate understanding of concepts relating to functions and annuities

The course will be covered in the following:

Unit-1

- Basic principles: Comparison, arbitrage and risk aversion, Interest (simple and compound,

COURSE & PROGRAM OUTCOMES OF GEOGRAPHY HONOURS (B.A. & B.Sc.) UNDER CBCS

Geography is the study of places and the relationships between people and their environments. Geographers explore both the physical properties of Earth's surface and the human societies spread across it. They also examine how human culture interacts with the natural environment and the way those locations and places can have an impact on people. Geography seeks to understand where things are found, why they are there, and how they develop and change over time. The study of the diverse environments, places, and spaces of Earth's surface and their interactions. It seeks to answer the questions of why things are as they are where they are. The modern academic discipline of geography is rooted in ancient practice, concerned with the characteristics of places, in particular their natural environments and peoples, as well as the relations between the two.

Choice Based Credit System (CBCS): Syllabus in Geography

INTRODUCTION:

In compliance with recent directives from the University Grants Commission, the undergraduate syllabus for Geography is reframed into Choice Based Credit System largely following the model syllabus prepared by the West Bengal State Council of Higher Education.

The main objective of this new curriculum is to give the students a holistic understanding of the subject, putting equal weightage to the core content and techniques used in Geography. The syllabus tries to give equal importance to the two main branches of Geography: Physical and Human.

The principal goal of the syllabus is to enable the students to secure a job at the end of the undergraduate programme. Keeping this in mind and in tune with the changing nature of Geography, adequate emphasis is rendered on applied aspects of the subject such as emerging techniques of mapping and field-based data generation, especially in the honours course. The syllabus emphasizes on development of basic skills of the subject, so that everyone need not go for higher studies in search of professional engagement or employment.

LEARNING OUTCOMES:

This syllabus is designed to impart basic knowledge on geography as a spatial science and train the undergraduates to secure employment in the sectors of geospatial analysis, development and planning, mapping and surveying.

Honours Course: Core Subjects

- GEO-A-CC-1-01-TH/P – Geotectonic and Geomorphology
- GEO-A-CC-1-02-TH/P – Cartographic Techniques
- GEO-A-CC-2-03-TH/P – Human Geography
- GEO-A-CC-2-04-TH/P – Cartograms, Thematic Mapping and Surveying
- GEO-A-CC-3-05-TH/P – Climatology
- GEO-A-CC-3-06-TH/P – Hydrology and Oceanography
- GEO-A-CC-3-07-TH/P – Statistical Methods in Geography
- GEO-A-CC-4-08-TH/P – Economic Geography
- GEO-A-CC-4-09-TH/P – Regional Planning and Development
- GEO-A-CC-4-10-TH/P – Soil and Biogeography
- GEO-A-CC-5-11-TH/P – Research Methodology and Fieldwork
- GEO-A-CC-5-12-TH/P – Remote Sensing, GIS and GNSS
- GEO-A-CC-6-13-TH/P – Evolution of Geographical Thought
- GEO-A-CC-6-14-TH/P – Disaster Management

Honours Course: Choices for Four Discipline Specific Electives

- GEO-A-DSE-A-5-01-TH/P – Fluvial Geomorphology
- GEO-A-DSE-A-5-02-TH/P – Climate Change: Vulnerability and Adaptations
- GEO-A-DSE-A-5-03-TH/P – Environmental Issues in Geography
- GEO-A-DSE-A-5-04-TH/P – Resource Geography
- GEO-A-DSE-B-6-05-TH/P – Cultural and Settlement Geography
- GEO-A-DSE-B-6-06-TH/P – Social Geography
- GEO-A-DSE-B-6-07-TH/P – Urban Geography
- GEO-B-DSE-B-6-08-TH/P – Geography of India

Honours Course: Choices for Two Skill Enhancement Courses

- GEO-A-SEC-A-3-01-TH – Coastal Management
- GEO-A-SEC-A-3-02-TH – Tourism Management
- GEO-A-SEC-B-4-03-TH – Rural Development
- GEO-A-SEC-B-4-04-TH – Sustainable Development

General Course: Core Subjects

- GEO-G-CC-1-01-TH/P – Physical Geography
- GEO-G-CC-2-02-TH/P – Environmental Geography
- GEO-G-CC-3-03-TH/P – Human Geography
- GEO-G-CC-4-04-TH/P – Cartography

General Course: Choices for Two Discipline Specific Electives

- GEO-G-DSE-A-5-01-TH/P – Regional Development
- GEO-G-DSE-A-5-02-TH/P – Geography of Tourism

COURSE OUTCOMES

[B.A./B.Sc. Geography Honours]

The course outcomes of the different papers offered are presented below. After completion of the course the student will be able to:

SEMESTER – I - HONOURS COURSE

[(4+2) +(4+2) =12 Credits]

OBJECTIVES:

☐ CC 01 GEOTECTONICS & GEOMORPHOLOGY

is about all endogenetic forces, tectonic activities, Earth's structural evolution and evolution of landforms (coastal, glacial, aeolian). This section also includes theories on landscape evolution. The practical course encompasses Megascopic identification of rocks and minerals and extraction and interpretation of geomorphic, geomorphic information from topographical sheets.

☐ CC 02 CARTOGRAPHIC TECHNIQUES

covers Components and classification of maps, concept and application of scales, Representation of data: primary, secondary. The practical course includes construction of scales and map projections, preparation of thematic maps.

COURSE OUTCOMES

Dr. Sasabindu Jana
Principal
PRINCIPAL
RAIDIGHI COLLEGE

RAIDIGHI COLLEGE

(A NAAC Accredited College)

P.O. & P.S. - Raidighi, South 24 Parganas, Pin- 743383

Phone No. 9735340005

Website – www.raidighicollege.in

Email – principal.raidighi@gmail.com, raidighicollege95@gmail.com

This section will enlighten the students with global tectonic mechanism, earth surface features, geology, concept and measuring of distance. i.e.

CC 01 GEOTECTONICS & GEOMORPHOLOGY

- Understand the theories and fundamental concepts of Geotectonic and Geomorphology. Understand earth's tectonic and structural evolution. Gain knowledge about earth's interior. Develop an idea about concept of plate tectonics, and resultant landforms.
- Acquire knowledge about types of folds and faults and earthquakes, volcanoes and associated landforms.
- Understanding crustal mobility and tectonics; with special emphasis on their role in landform development.
- Overview and critical appraisal of landform development models.
- Ability to record temperature, pressure, humidity and rainfall
- Develop the skills of identification of features and correlation between them.

CC 02 CARTOGRAPHIC TECHNIQUES

- Do field surveys using appropriate techniques. Identification of rocks and minerals.
- Understand and prepare different kinds of maps.
- Recognize basic themes of map making.
- Development of observation skills.

Dr. Sasabindu Jana

Email – principal.raidighi@gmail.com, raidighicollege95@gmail.com

SEMESTER – II - HONOURS COURSE

[(4+2) +(4+2) =12 Credits]

OBJECTIVES:

CC 03 HUMAN GEOGRAPHY

Elements of human geography, concept of race and ethnicity, evolution of human society, population, demographic transition and rural – urban settlements. The practical course includes presentation of spatial and temporal variation of population data.

CC 04 CARTOGRAMS, THEMATIC MAPPING & SURVEYING

Preparation and interpretation of geological and weather maps, land use land cover maps and basic concepts of surveying and surveying equipment. Practical course includes surveying using instruments and preparation of geological maps.

COURSE OUTCOMES

Dr. Sasabindu Jana
Principal
PRINCIPAL
RAIDIGHI COLLEGE

RAIDIGHI COLLEGE

(A NAAC Accredited College)

P.O. & P.S. -Raidighi, South 24 Parganas, Pin- 743383

Phone No. 9735340005

Website – www.raidighicollege.in

Email –principal.raidighi@gmail.com, raidighicollege95@gmail.com

□ This section will provide an idea about the evolution of human society and culture, settlements, spatial & temporal distribution of population. How to prepare & interpret the geological & weather map & will also help to learn the use of surveying instruments. i.e.

□

CC 03 HUMAN GEOGRAPHY

- Gain knowledge about major themes of human Geography.
- Acquire knowledge on the history and evolution of humans.
- Understand the approaches and processes of Human Geography as well as the diverse patterns of habitat and adaptations.
- Develop an idea about space and society

CC 04 CARTOGRAMS, THEMATIC MAPPING & SURVEYING

□

- Comprehend the concept of scales and representation of data through cartograms.
- Interpret geological and weather maps.
- Learn the usages of survey instruments.
- Brings direct interaction of different types of surveying instruments like Dumpy level and Theodolite with environment.
- Develop an idea about different types of thematic mapping techniques.

□

SEMESTER – III - HONOURS COURSE

[(4+2) + (4+2) + (4+2) + 2] =20 Credits

OBJECTIVES:

CC 05 CLIMATOLOGY

This section describes the interrelationship between different elements of weather, overview of climate change. Also includes the atmospheric disturbances and climatic classification. Practical course is about the measurement of weather elements using analogue instruments and interpretation of weather map (pre-monsoon, monsoon and post-monsoon).

CC 06 HYDROLOGY & OCEANOGRAPHY

Dr. Sasabindu Jana
Principal
RAIDIGHI COLLEGE

RAIDIGHI COLLEGE

(A NAAC Accredited College)

P.O. & P.S. -Raidighi, South 24 Parganas, Pin- 743383

Phone No. 9735340005

Website – www.raidighicollege.in

Email –principal.raidighi@gmail.com, raidighicollege95@gmail.com

This section is about surface and groundwater hydrology. The oceanography part describes physical and chemical properties of ocean water, reefs, marine resources and sea-level change. Practical course analyses the hydrographs and climatic water budget.

CC 07 STATISTICAL METHODS IN GEOGRAPHY

This portion of the course state the significance of statistics in geography. Data collection, sampling and numerical data analysis. Practical course is about data analysis and interpretation of the findings.

SEC Coastal Management / Tourism Management

Coastal management is about the coastal morphodynamics, environmental impacts of mining in coastal areas, management strategies to combat the coastal hazards and principals of coastal management. Tourism management discusses about scope and issues regarding tourism, information to plan destination marketing, tourism impact assessment and global tourism.

COURSE OUTCOMES

Dr. Sasabindu Jana
Principal
PRINCIPAL
RAIDIGHI COLLEGE

RAIDIGHI COLLEGE

This section will enlighten the students with the interrelationship between different elements of weather, atmospheric disturbances, climate change phenomenon. It will also help to know about surface & groundwater hydrology, oceanic features, coastal morpho dynamics, coastal hazards & management and also the use of statistical techniques to measure different parameters.

CC 05 CLIMATOLOGY

- Understand the elements of weather and climate, different atmospheric phenomena and climate change.
- Learn to associate climate with other environmental and human issues. Approaches to climate classification.
- To analyze the dynamics of the Earth's atmosphere and global climate. Assessing the role of man in global climate change.
- Prepare various climatic maps and charts and interpret them.
- Learn to use of various meteorological instruments.
- Learn the interaction between the atmosphere and the earth's surface. Understand the importance of the atmospheric pressure and winds.
- Understand how atmospheric moisture works.

CC 06 HYDROLOGY & OCEANOGRAPHY

- Analyze the concepts of Hydrology and Oceanography
- Emphasizing the significance of groundwater quality and its circulation
- Evaluate the role of the global hydrological cycle.
- Studying the behavior and characteristics of the global oceans.
- Realize the importance of water conservation.
- Identify marine resources and characteristics of ocean waters.
- Interpret hydrological and rainfall dispersion graphs and diagrams.

CC 07 STATISTICAL METHODS IN GEOGRAPHY

- To Learn the significance of statistics in geography. Understand the importance of use of data in geography
- Recognize the importance and application of Statistics in Geography
- Interpret statistical data for a holistic understanding of geographical phenomena.
- Know about different types of sampling.

- Develop an idea about theoretical distribution.
- Learn to use tabulation of data.
- Gain knowledge about association and correlation.

SEC Coastal Management / Tourism Management

- Learn Scope and Nature: Concepts and issues, tourism, recreation and leisure inter-relations; Factors influencing tourism, Types of Tourism: Ecotourism, cultural tourism, adventure tourism, medical tourism, pilgrimage, international, national.
- Use of information on factors (Historical, natural, socio-cultural and economic; motivating factors for pilgrimages) to plan destination marketing; tourism products; niche tourism planning; Tourism impact assessment, Sustainable tourism, Information Technology and Tourism, Tour operations planning and guiding.
- Increasing Global tourism; Tourism in India: Tourism infrastructure, access, planning for different budgets for case study sites of Western Himalayas, Goa, Chilka / Vembanad, Jaipur

OBJECTIVES:

CC 08 ECONOMIC GEOGRAPHY

This section discusses about the sectors of economy, locational theories, international trade and WTO. Practical course describes GDP, temporal analysis of production and transport network analysis.

CC 09 REGIONAL PLANNING & DEVELOPMENT

It gives the glimpse of principles and objectives of regional planning, multilevel planning, concept of growth and development, models on regional development and underdevelopment. Practical course includes measuring inequality, delineation of formal and functional regions.

CC 10 SOIL & BIOGEOGRAPHY

This portion discusses about physical and chemical properties of soil, problems of soil erosion. Biogeography discusses about biosphere, ecosystem, biomes, deforestation and biodiversity. Practical course is about determination of soil pH and salinity, textural plotting and determination of plant species diversity.

SEC Rural Development / Sustainable Development

Rural development describes about concept and basic elements and measures of level of rural development, areal approach and rural governance. Sustainable development describes about concept, background, components and limitations of such development.

COURSE OUTCOMES

- This section will provide the idea about sectors of economy, the significance of location in economic benefits, GDP, objectives & significance of regional planning, Physical & Chemical properties of soil, problems of soil erosion, detailed discussion on Biosphere and sustainable approach to the environment.
- **CC 08 ECONOMIC GEOGRAPHY**
 - Understand the concept of economic activity, factors affecting location of economic activity.
 - Gain knowledge about different types of Economic activities
 - Assess the significance of Economic Geography, the concept of economic man and

Dr. Sasabindu Jana

theories of choice.

- Analyze the factors of location of agriculture and industries.
- Understand the evolution of varied types of economic activities.
- Map and interpret data on production, economic indices, transport network and flows.

CC 09 REGIONAL PLANNING & DEVELOPMENT

- Understand and identify regions as an integral part of geographical study.
- Appreciate the varied aspects of development and regional disparity, in order to formulate measures of balanced development.
- Analyzing the concept of regions and regionalization.
- Studying typical physiographic, planning, arid and biotic regions of India. Understanding the detailed geography of India.
- Gain knowledge about definition of region, evolution and types of regional planning.
- Develop an idea about choice of a region for planning.
- Build an idea about theories and models for regional planning. Know about measuring development indicators.
- They can know about delineation of formal regions by weighted index method and also delineation of functional regions by breaking point analysis.
- Gain knowledge about measuring inequality by
- Location Quotient, and also measuring regional disparity by Sopher Index

CC10 SOIL & BIOGEOGRAPHY

- Have knowledge about the character and profile of different soil types.
- Understand the impact of man as an active agent of soil transformation, erosion and degradation.
- Recognize land capability and classify it.
- Explaining the Pedological and Edaphological Approaches to Soil Studies - Processes of soil formation, types of soil, and principles of soil and land classification; and management.
- Understand the varied ecosystems and classify them.
- Recognize the significance of biogeochemical cycles and biodiversity.
- Comprehend the devastating impact of deforestation.
- Identify soil types and derive their pH.

SEC RURAL DEVELOPMENT / SUSTAINABLE DEVELOPMENT

- It provides the basic concept of Rural Development and its components with several levels

Dr. Sasabindu Jana
Principal

SEMESTER – V- HONOURS COURSE

[(4+2) + (4+2) + (4+2) + (4+2)] =24 Credits

OBJECTIVES:

CC11 RESEARCH METHODOLOGY & FIELDWORK

This portion is about significance of study, formulation of research design, defining the problem, objectives and hypothesis, helps to learn the techniques of writing the report and plagiarism. Field work is a hands-on course which incorporates the analysis of data obtained from both primary and secondary survey and the interpretation of the research findings and recommendations.

CC12 REMOTE SENSING, GIS and GNSS

The course is about image enhancement, classification of supervised data, data attachment and preparation of annotated thematic maps. The Practical course helps to application of IRS - LANDSAT data. Preparation of FCC images, GIS data analysis and GNSS positioning and waypoint collection.

DSE-A-5 CLIMATE CHANGE: VULNERABILITY & ADAPTATIONS

This portion provides a detailed study on climate change with time scale, causes and problems of climate change or climate change vulnerabilities & global and local level to climate change mitigation.

DSE-B-5 SETTLEMENT & CULTURAL GEOGRAPHY

It is about the cultural elements (cultural diffusion, diversity, realm, religion, language) & settlement (types and distribution). It also enlightens about world racial groups & cultural regions of India.

COURSE OUTCOMES

Dr. Sasabindu Jana
Principal
RAIDIGHI COLLEGE

RAIDIGHI COLLEGE

Email – principal.raidighi@gmail.com, raidighicollege95@gmail.com

The course helps to build the conceptual framework about the research design, significance of study and analytical ability for a student. Remote sensing, GIS & GNSS helps to enhance the skill to process & analyse data obtained through satellites.

CC11 RESEARCH METHODOLOGY & FIELDWORK

- Have expertise in identification of area of study, methodology, quantitative and quantitative analysis, and conclusions to be drawn about the area – fundamental to geographical research.
- Handle logistics and other emergencies on field.
- Develop skills in photography, mapping and video recording.

CC12 REMOTE SENSING, GIS and GNSS

- Have knowledge of the principles of remote sensing, sensor resolutions and image referencing schemes.
- Interpret satellite imagery and understand the preparation of false color composites from them.
- Training in the use Geographic Information System (GIS) software for contemporary mapping skills.
- Analyzing and interpreting remotely sensed satellite images and aerial photographs in order to understand topographical and cultural variations on the Earth's surface.
- Conducting field excursions and preparation of field report on research on problem in different areas of India
- Apply GIS to the preparation of thematic maps.
- Use GNSS.

DSE-A-5 CLIMATE CHANGE: VULNERABILITY & ADAPTATIONS

- Understand climate change with reference to the geological time scale
- Assess the Origin Greenhouse gases and global warming Global climatic assessment and Impact of climate change: Agriculture and water; flora and fauna; human health and morbidity
- Learn Global initiatives to climate change mitigation: Kyoto Protocol, carbon trading, clean development mechanism, COP, climate fund.
- Analysis of trends of temperatures
- Analyze the rainfall variability of about three decades of climatic regions of India.
- Understand Climate change vulnerability assessment and adaptive strategies with particular reference to South Asia
- Analyse Role of urban local bodies, panchayats and educational institutions on climate change mitigation: Awareness and action programmes
- Develop concepts and skills regarding mitigation measures concerning climatic hazards.

DSE-B-5 SETTLEMENT & CULTURAL GEOGRAPHY

- Understand the scope and content of cultural geography
- Trace the development of cultural geography in relation to allied disciplines
- Understand the concept of cultural hearth and realm, cultural diffusion, diffusion of religion
- Develop an understanding of cultural segregation and cultural diversity, technology and development
- Learn about the various races and racial groups of the world
- Identify the cultural regions of India
- Acquire knowledge about Rural settlements- Definition, nature and characteristics
- Analyze the morphology of rural settlements
- Learn the rural house types, census categories of rural settlements and idea of social segregation
- Learn the census definition and categories of urban settlements
- Analyze the urban morphology models of Burgess, Hoyt, Harris and Ullman
- Differentiate between city-region and conurbation
- Analyze the functional classification of cities
- Develop the skill of mapping language distribution of India
- Learn to plot proportional squares to illustrate housing distribution
- Acquire the skill of identifying rural settlement types from topographical sheet
- Understand Social Area Analysis of a city based on Shevky and Bell

SEMESTER - VI - HONOURS COURSE

[(4+2) + (4+2) + (4+2) + (4+2)] =24 Credits

OBJECTIVES:

CC13 EVOLUTION OF GEOGRAPHICAL THOUGHT

The philosophy of geography is about the 'Pre-Modern Geography' and the foundations of modern Geography and recent trends (structural, behavioural, humanistic, radical approach). Practical course involves changing perception of maps and mapping voyages.

CC14 DISASTER MANAGEMENT

This portion comprises the concept of hazard and disaster. Hazard mapping and hazard specific study on West Bengal and India. Factors, vulnerability, consequences and management. Practical course involves preparation of a group project on a specific hazard.

DSE RESOURCE GEOGRAPHY/GEOGRAPHY OF INDIA

The Resource Geography consults with the type of various resource and its uses for the development of the nation. Different policy to conserve, utilize and depletion of the resource in respect to the World. Sustainable use of the resources for the future generation of this planet. Geography of India is about the physical as well as cultural features of India, development and distribution.

This course gives an overview on evolution of geographical thought. Geographical approaches during Pre-modern, Modern & Post-modern phase. Hazard management provides the causes, consequences and management strategies of different hazards. The environmental issues help to learn how to prepare the checklist for EIA and implementation of that and enhance the skill to analyse the pollution data. Geography of India provides the overview about the physical as well as cultural features of India.

CC13 EVOLUTION OF GEOGRAPHICAL THOUGHT

- Perceive the evolution of the philosophy of Geography.
- Appreciate the contribution of the thinkers in Geography.
- Give power point presentations on different schools of geographical thought.
- Discussing the evolution of geographical thought from ancient to modern times.
- Establishing relationship of Geography with other disciplines and man-environment relationships.
- Analyzing modern and contemporary principles of Empiricism, Positivism, Structuralism, Human and Behavioral Approaches in Geography

CC14 DISASTER MANAGEMENT

- Understand the nature of hazards and disasters.
- Assess risk, perception and vulnerability with respect to hazards.
- Prepare hazard zonation maps.
- Assessing the nature, impact and management of major natural and man-made hazards affecting the Indian subcontinent.

DSE RESOURCE GEOGRAPHY/GEOGRAPHY OF INDIA

- Understanding the resource type and its utilization.
- Role of resources to the growth and development of the national economy
- Adopt the knowledge of resource related problems throughout the world
- Learning the pattern of world resource
- Politics of resources and sustainability in resource utilization for the future world
- Mapping and Presentation of the decadal changes of world natural resource
- To know the physiographic division of India
- Understanding the Physical and Cultural aspects of India
- Learning about the people of India & their culture
- Comprehension about the natural resources of India and the emerging crisis
- Highlighting The regional disparity and the burning issues of the country.

Email – principal.raidighi@gmail.com, raidighicollege95@gmail.com

PROGRAMME OUTCOMES

- ❖ PO 01 - Knowledge Explore: To understand the scope and evolution of the diverse discipline of Geography.
- ❖ PO 02 - Application of the Discipline Knowledge: Recognize, synthesize and evaluate diverse sources of knowledge, arguments and approaches pertinent to exploring human-environment problems. Explain societal relevance of geographical knowledge and apply it to real world human- environment issues.
- ❖ PO 03 - Significance of Nature: Appreciate and reflect critically on the importance of holistic and interpretative human- environment perspectives.
- ❖ PO 04 - Caring of the Mother Earth: An understanding and acknowledgment of the threats that endanger the earth's natural systems. This helps in further realization of the significance of anthropogenic causes of many of the disasters and threats that puts life on this planet on the edge.
- ❖ PO 05 - Application of Field Knowledge: Development of knowledge, skills and holistic understanding of the discipline among students. Encouragement of scientific mode of thinking and scientific method of enquiry in students. This goal is achieved through the regular field excursions conducted by the Department to various parts of India extensively and the writing of a report/thesis on it.
- ❖ PO 06 - Disaster Management Skills: Students become equipped with the ability to respond to both natural and man-made disasters and acquire management skills. This is attained through the curriculum by studying and analyzing hazards, disasters, their impact and management.
- ❖ PO 07 - Research Ability: Ability to undertake research in interdisciplinary studies and problems or issues beyond the realm of what strictly comes under the purview of geography. This is possible because of the varied nature of the curriculum that encompasses the study and analyses of concepts of sub-disciplines and allied disciplines of Geology, Seismology, Pedology, Hydrology, Environmental Studies, Disaster Management, Resource Management and Conservation, Regional Planning and Development Studies etc.
- ❖ PO 08 - Critical Thinking: Take informed actions after identifying the assumptions that frame our thinking and actions, checking out the degree to which these assumptions are accurate and valid, and looking at our ideas and decisions (intellectual, organizational, and personal)

from different perspectives.

- ❖ PO 09 - Effective Communication: Speak, read, write and listen clearly in person and through electronic media in English and in one Indian language, and make meaning of the world by connecting people, ideas, books, media and technology.
- ❖ PO 10 - Social Interaction: Elicit views of others, mediate disagreements and help reach conclusions in group settings.
- ❖ PO 11 - Effective Citizenship: Demonstrate empathetic social concern and equity centred national development, and the ability to act with an informed awareness of issues and participate in civic life through volunteering.
- ❖ PO 12 - Ethics: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them.
- ❖ PO 13 - Environment and Sustainability: Understand the issues of environmental contexts and sustainable development.
- ❖ PO 14 - Self-directed and Life-long Learning: Acquire the ability to engage in independent and lifelong learning in the broadest context socio-technological changes.

PROGRAMME SPECIFIC OUTCOMES

- ❖ PSO 01 - Student will gain the knowledge of physical geography. They will gather knowledge about the fundamental concepts of Geography and will have a general understanding about the geomorphologic and geotectonic process and formation. Imbibing knowledge, skills and holistic understanding of the Earth, atmosphere, oceans and the planet through analysis of landform development; crustal mobility and tectonics, climate change.
- ❖ PSO 02 – Associating landforms with structure and process; establishing man-environment relationships; and exploring the place and role of Geography vis-a-sis other social and earth sciences. Students can easily correlate the knowledge of physical geography with the human geography. They will analyze the problems of physical as well as cultural environments of both rural and urban areas. Moreover, they will try to find out the possible measures to solve those problems
- ❖ PSO 03 – Understanding the functioning of global economies, geopolitics, global geostrategic

Dr. Sasabindu Jana
Principal
RAIDIGHI COLLEGE

RAIDIGHI COLLEGE

(A NAAC Accredited College)

P.O. & P.S. -Raidighi, South 24 Parganas, Pin- 743383

views and functioning of political systems

- ❖ PSO 04 – Developing a sustainable approach towards the ecosystem and the biosphere with a view to conserve natural systems and maintain ecological balance.
- ❖ PSO 05 –The physical environment, human societies and local and/or global economic systems are integrated to the principles of sustainable development
- ❖ PSO 06 – Inculcating a tolerant mindset and attitude towards the vast socio-cultural diversity of India by studying and discussing contemporary concepts of social and cultural geography. Explaining and analyzing the regional diversity of India through interpretation of natural and planning regions.
- ❖ PSO 07 – Analyzing the differential patterns of the human habitation of the Earth, through studies of human settlements and population dynamics. Understanding and accounting for regional disparities, poverty, unemployment and the impacts of globalization
- ❖ PSO 08 – Understanding the history of the subject; over viewing ancient and contemporary geographical thought and its relationship with modern concepts of empiricism, positivism, radicalism, behavioralism, idealism etc.
- ❖ PSO 09 – Sensitization and awareness about the hazards and disasters to which the subcontinent is vulnerable; and their management.
- ❖ PSO 10 – As a student of the Course they will enrich their observation power through field experience and in future this will be helpful for identifying the socio- environmental problems of their community.
- ❖ PSO 11 – Training in practical techniques of mapping, cartography, software, interpretation of maps, photographs and images etc; so as to understand the spatial variation of phenomena on the Earth's surface. They will learn how to prepare map based on GIS by using the modern geographical map making techniques.
- ❖ PSO 12 – The students will be enlightened with global tectonic mechanism, earth surface features, geology, concept and measuring of distance.
- ❖ PSO 13 – The students will have an idea about the evolution of human society and culture,

settlements, spatial & temporal distribution of population. How to prepare & interpret the geological & weather map & will also help to learn the use of surveying instruments

- ❖ PSO 14 – The students will be enlightened with the interrelationship between different elements of weather, atmospheric disturbances, climate change phenomenon. It will also help to know about surface & groundwater hydrology, oceanic features, coastal morphodynamics, coastal hazards & management and also the use of statistical techniques to measure different parameters.
- ❖ PSO 15 – The students will have an idea about sectors of economy, the significance of location in economic benefits, GDP, objectives & significance of regional planning, Physical & Chemical properties of soil, problems of soil erosion, detailed discussion on Biosphere and sustainable approach to the environment.

Name of the Course/Programme: B.A./B.Sc. Geography General

Sem 1:

Course Type: CC 1 Th+Pr. Credit: 4+2

COURSE OUTCOME

Course Name: Physical Geography

- Basic understanding of Earth's structure, composition and dynamic changes
- Formation of relief: types and their origin
- Evolution of Earth's topography and ordering of landforms as well as landscape through different geomorphic agents
- Analysis of Hydrological scenarios of the Earth and its impact on environment
- Identification of distribution and physico-chemical characteristics of Ocean water in different climatic regions with an approach of sustainable utilization
- Acquire applied knowledge on different forms of rocks and minerals with overall cartographic and qualitative interpretation of topographical map base landscape analysis

Email – principal.raidighi@gmail.com, raidighicollege95@gmail.com

Sem 2:

Course Type: CC 2 Th+Pr. Credit: 4+2

COURSE OUTCOME

Course Name: Environmental Geography

- Understanding of global climatological patterns and interrelationships of different components considering different latitudinal locational uniqueness
- Proper knowledge development on Contemporary issues like Climate change, greenhouse effects and issues of environmental pollution
- Identification of soil profiles and their characteristics different parts of the world with overall interpretation of regional air-water-soil combination as well as management
- Basic understanding of global as well as regional ecosystem and biodiversity with their impact on human habitations and adjoining territories
- Ability to record different environmental parameters including Biodiversity Register from localities and mapping of sub continental weather phenomenon

Sem 3:

Course Type: CC 3 Th + Pr. Credit: 4+2+2

COURSE OUTCOME

Course Name: Human Geography

- Trace the rise, classification, growth and locational analysis of different economic components in both regional and global level
- Understanding the development of Human society and the different issues of social organizations, their evaluation, dynamic changes and challenges through time
- Recognize the settlement patterns and structural changes with geographical compulsions.
- Analyze cultural understanding and regional distinctiveness from global

understanding to local aspirational issues

- Cartographic interpretation of Indian state wise or National level production and performance data with specific attention to topographical map analysis related with development clusters.

SEC: Coastal Management Th Credit: 2

- Evaluation of Coastal geomorphology with special reference to forms and changing patterns due to anthropogenic activities
- Analysis of environmental impact of Coastal hazards both short and long term under the shadow of commercial interests and socio-economic compulsions
- Analysis of Coastal Management in global and sub continental cases with special mention to India 's experiences and possibilities with changing environmental awareness.

Sem 4:

Course Type: CC 4 Th +Pr. Credit: 4+2+2

COURSE OUTCOME

Course Name: Cartography

- Understanding of different forms, classification and utilization of scales and map projections
- Acquiring knowledge about different techniques, instruments and their effective utilization on ground at the time of Surveying and Leveling.
- Identification and reading of Remote Sensing Data base map as well as interpretation of Satellite imageries with basic understanding.
- Construction of different components of measurements and indicators associated with maps and ground level locational interpretation

SEC: Rural Development Th Credit: 2

- Understanding of the basic knowledge of rural development and needful accessibility for regional balance
- Trace the changing dynamics of rural development models and ethical as well as economic benefits, challenges on Indian soil
- Understanding rural governance systems in India and its attributes since independence.

Sem 5

Course Type: DSE -1 Th + P Credit: 4+2+2

COURSE OUTCOME

Course Name: Regional Development

- Understanding on basic concept of region and regionalization
- Analysis of strategies and development programs for the regional growth and development in India
- Understanding issues and challenges related with regional disparities and development challenges since independence
- Applications of regional development analysis and statistical interpretation of measurements of inequality and growth patterns.

Course Name: Geography of Tourism

- Trace the scope, nature and changing patterns of tourism in India
- Analysis of impact of tourism with special mention to social, cultural, economic, religious and political uniqueness in diversity of India
- Explanation of promotional patterns of contemporary tourism and technology base tourism planning in globalized world with special mention to India
- Cartographic interpretation of tourist flow and destination choices with special emphasis on Environmental impact analysis of tourism.

Course Name -SEC: Forest and Wildlife Management Th Credit: 2

- Historical understanding of forest and wildlife management in India, socio-economic background of changing laws and prohibition
- Understanding of different aspects of deforestation and poaching in forests: causes and consequences

- Trace the role of human activities in forest and wildlife management in India with special mention to environmental movements of native villagers particularly women.

Sem 6:

Course Type: DSE -2 Th+Pr. Credit: 4+2+2

COURSE OUTCOME

Course Name: Agricultural Geography

- Trace the agricultural system and locational analysis with special mention to factors affecting development and dispersal of agriculture
- Details understanding of regionalization of agricultural growth under expert's observations and changing perspectives from global to regional scale
- New challenges of agriculture in India with special reference to impact on Socio-economic backwardness in globalized era.
- Cartographic measurements of agricultural growth and different forms of mapping for crop patterns and its changing nature

Course Name: Population Geography

- Special understanding of global population dynamics with special reference to demographic components and changing patterns of distribution
- Trace the different aspects of Migration and population policies of different experiences with special reference to India since its colonial period.
- Analysis of different Contemporary issues of population with special mention to health hazards.

- Cartographic and statistical interpretation of population data particularly related with socio-economic development.

Course Name: SEC -4 Sustainable Development Th Credit: 2

- Understanding the concept and historical perspective of Sustainable development in contemporary world.
- Trace the challenges of Sustainability and effective analytical studies particularly on environment and poverty
- Global environmental issues related with sustainable development and understanding of co-existence
- Knowledge development on the issues of global goals for sustainable development

Program Outcomes

- Geography is not only a dynamic subject but also it is mother subject considering all the concerned of human surroundings. The understanding of the scope and content of Geography is very important students with diverse backgrounds.
- As geography is expressing different aspects of human-environment relationships, mutual human coordination and conflicts within society and regional distinctiveness students' acknowledgment of this program is not only essential for academic benefits but also for social responsibilities.
- The present age is known as Anthropocene. Youth must learn challenges, opportunities, threats and distinctiveness of the present system of planet earth and human civilization acquiring knowledge from different sections of present program.
- Development is a key issue for holistic plan of sustainability and progression. Students' involvement with this program is a learning experience for better understanding of development purposes, requirements and management in and around our environment.
- Our general students are very much oriented with multidisciplinary studies and issue base understanding of the problems of both nature and human beings. Geography gives the insight of such kind of introspection and interrelationships. There are several components in our Geography general curriculum which is closely associated with other disciplines and sub-disciplines. Environmental studies, Human Geography, Regional Development, Forest and Wildlife Management, Coastal

**Course and Programme & Outcomes Of
B.Sc. (HONOURS) FOOD AND NUTRITION (FNTA)
CBCS SYSTEM -2018
UNIVERSITY OF CALCUTTA**

RAIDIGHI COLLEGE

COURSE TITLE: B.Sc. (Honours) in Food and Nutrition.

COURSE DESCRIPTION: B.Sc. in Food & Nutrition is a 3years undergraduate course comprising of 6 semesters offering multidisciplinary subject including various aspects of food, health and nutrition such as basic food science, human physiology, human nutrition in different phases of life, community health and nutrition, knowledge about food commodities, therapeutic diet, nutritional biochemistry, food chemistry, community nutrition, public health, food preservation, food microbiology, food service management, sports nutrition, geriatric nutrition, nutrition and health education, Mushroom culture, diet counselling and patient care, bakery science, food safety and quality control, functional foods and nutraceuticals, food fermentation and food packaging- both theory and practical.

Job prospects of this course include the opportunity to work as dietitians in hospitals, nutritionists in clinics or gyms/ health clubs and as food scientists, food technologists, quality control managers, food production managers, community health workers, health and nutrition instructors in NGOs are some of the options. Avenues for higher education remain open as they can do a Master's in food and nutrition or any other allied subjects and later do research work. Teaching options can also be availed after completion of this course.

SEME STER	COURSE CODE	NAME OF THE PAPER	COURSE OUTCOME
I	FNTA-CC-1 (Th & P)	BASIC FOOD SCIENCE-I	The theory portion of this paper gives in-depth information to a student about food, its function in the human body, classification, composition and different nutrients like carbohydrates, proteins and fats, their role in human health, digestion, absorption and metabolism, food sources, recommended dietary allowances, effects of deficiencies and excess on human health. (4 credits) The practical part includes the identification of carbohydrates, proteins, and glycerol. (2 credits)
	FNTA-CC-2 (Th & P)	HUMAN PHYSIOLOGY-I	The theory portion of this paper gives an idea about the unit of life and includes different vital systems like circulatory, cardiovascular, digestive, respiratory, and musculoskeletal -their structures, composition, functions and regulation. (4 credits) The practical includes the determination of pulse rate, blood pressure, bleeding time, clotting time, and haemoglobin level using different methods. (2 credits)
II	FNTA-CC-3 (Th & P)	BASIC FOOD SCIENCE-II	This paper teaches about dietary fibres, minerals, and vitamins- classification, sources, composition, properties, physiological roles, bio-availability, requirements, deficiency and excess along with the chapter on water. (4 credits) The practical of this paper includes the determination of ash, moisture, calcium, iron and vitamin C content in foods. (2 credits)
	FNTA-CC-4 (Th & P)	HUMAN PHYSIOLOGY-II	This paper includes topics like the excretory system, reproductive system, nervous system and endocrine system- their structure, functions, regulation of vital bodily mechanisms and other concepts required to understand human anatomy. (4 credits)

III	FNTA-CC-5 (Th & P)	HUMAN NUTRITION-I	<p>The practical of this paper teaches histological slide identifications of various parts of the human body, blood film staining and identification of different types of blood cells, qualitative determination of glucose acetone in urine and Harvard step test to check cardiovascular function status. (2 credits)</p> <p>The theory paper teaches about concepts, definitions, the scope of nutrition, recommended dietary allowances for different age groups of people, adult consumption unit (A.C.U.), ideas about energy, its units, basal metabolic rate, thermic effect of food, growth and development from infancy to adulthood, the importance of nutrition through these stages of life and prevention of growth faltering through growth monitoring and promotion, utility of growth charts and standards in infant -child care. (4 credits)</p> <p>The practical portion teaches different processes of cooking like pressure cooking, microwaving, steaming, grilling, and deep fat frying. It also imparts the general concepts of weights and measurements to the students. Eye estimation of raw and cooked food items is taught to develop a general idea of food. This practical includes planning and preparation of meals from different food groups, and supplementary meals for different age groups special focus on low-cost meal preparations for malnourished children and at-risk groups. (2 credits)</p>
	FNTA-CC-6 (Th & P)	COMMUNITY NUTRITION	<p>This core paper is all about community nutrition and health. It includes nutritional assessment methods like A-B-C-D which stands for anthropometry, biochemical methods, clinical findings and diet survey. Role of National and international agencies, and regional organisations in combating malnutrition in the community. Food security and nutritional intervention programmes to uplift community health. (4 credits)</p> <p>The practical includes field study where the</p>

IV	FNTA-CC-7 (Th & P)	FOOD COMMODITIES	<p>anthropometric measurements of infants -length, weight, circumference of head, chest and mid-upper arm as well as adults are done. The comparison of data with standards helps in interpretations to judge the nutritional status of the infants. Plotting of growth charts, and clinical assessments to identify nutritional deficiencies like vitamin A deficiency, anaemia, rickets etc. is also done along with 24-hour diet recall for estimation of food intakes. (2 credits)</p> <p>This paper gives in-depth knowledge about cereals, millets, pulses, milk and its products, eggs, meat, fish poultry, vegetables and fruits, sugar, fats and oils, raising and leavening agents-uses in cookery and bakery, food adjuncts, convenience foods, salt and beverages- their composition, structure, classification, selection, storage, spoilage, nutritional aspects. (4 credits)</p> <p>The practical is all about the detection of adulterants in commonly consumed food items for example- starch, sucrose, formalin, boric acid and urea in milk. It also includes the detection of urea in puffed rice, vanaspati in ghee/ butter, and khesari flour in besan. (2 credits)</p>
	FNTA-SEC- A-2 (Theory)	FOOD SERVICE MANAGEMENT	<p>This skill enhancement course (SEC) teaches about the organization of food service management-characteristics and functions. It also includes institutional service units, menu planning, kitchen handling, sanitation and hygiene, personnel management and many other aspects related to food service. (2 credits)</p> <p>Includes no practical.</p>

	<p>FNTA-CC-9 (Th & P)</p>	<p>DIET THERAPY- I</p>	<p>This paper teaches the student about the importance of nutrition during pregnancy, lactation, infancy, toddlers, preschool children, school-going children, and adolescence. Management of preterm and low-birth babies is also taught along with many other important sub-topics related to each stage of life. (4 credits)</p> <p>The practical teaches planning and preparation of adequate meals for different age groups with special reference to different physiological conditions: infants, pre-schoolers, school-going children, adolescents, adults, pregnancy, lactation and old age. (2 credits)</p> <p>This core paper is taught to give basic concepts of diet therapy to the students. Assessment of a patient's need and thus the team approach required to help him/her to recover faster from the disease condition. Routine hospital diets are taught like liquid, semi-solid, parenteral, and enteral feedings. Many disease conditions, their aetiology, symptoms and dietary management are taught through this core paper. It includes febrile conditions, diseases of the stomach-gastritis, peptic ulcer, intestinal diseases like inflammatory bowel disease, ulcerative colitis, constipation etc. Anaemia and diseases of the liver are also covered in this paper. (4 credits)</p> <p>The practical of this paper is very interesting as it teaches the students how food through proper planning and preparation can heal a patient alongside his medication. This paper includes planning and preparation of- normal, fluid, and semi-solid diets along with peptic ulcer, viral hepatitis and anaemia management diets. (2 credits)</p>
	<p>FNTA-CC-10 (Th & P)</p>	<p>NUTRITIONAL BIOCHEMISTRY -I</p>	<p>This paper introduces the student to the scope and</p>

V	FNTA-SEC-B-1	NUTRITION AND HEALTH EDUCATION	<p>inter-relationship between biochemistry and other biological sciences. It deals with enzymes, their classification, their role in the human body, metabolism of carbohydrates, various pathways, lipids-its oxidation, biosynthesis, and clinical significance. (4 credits)</p> <p>The practical paper includes a quantitative estimation of sugars- glucose, lactose, and starch along with the estimation of acid value, iodine value, saponification value of fats, and estimation of blood glucose and serum cholesterol. (2 credits)</p>
	FNTA-CC-11 (Th & P)	DIET THERAPY-II	<p>This paper deals with the concept, objectives, and importance of nutrition and health education in uplifting community health as well as individual health. It teaches the principles of effective communication process, steps included in planning health & nutrition education, various methods of teaching and techniques of evaluation to assess the effectiveness or outcome of such education programs.</p>
	FNTA-CC-12 (Th & P)	NUTRITIONAL BIOCHEMISTRY	<p>This paper teaches energy modifications and nutritional care for weight management, diet in diabetes mellitus, hypertension, cardiovascular diseases, renal diseases and nephrolithiasis- their symptoms, aetiology, dietary management and ways to prevent them through lifestyle modifications. (4 credits)</p> <p>The practical includes planning and preparation of diets for the following diseases - obesity, underweight, Diabetes mellitus, hypertension, atherosclerosis, acute & chronic glomerulonephritis. (2 credits)</p>

PROGRAM OUTCOMES (POs)

PO 1- Development of intra-disciplinary knowledge & skills – Studying a wide range of subjects like Dietetics, Community Nutrition, Family Meal Management, Quantity Food Production and service, Food Safety and Quality Control, Therapeutic nutrition, and Geriatric Nutrition –both theory and practical, helps students develop in-depth knowledge and requisite skills which opens avenues for various job prospects.

PO 2 – Scientific and Critical Thinking – With the gain of scientific knowledge, and hands-on skills through practical and demonstration these students develop critical thinking.

PO 3- Health management and community upliftment- The course teaches the student the importance of healthy eating and its impact on the mind body and soul. It helps them to work on their health as well as uplift their family and community health through the dissemination of information gathered in this course.

PO 4- Entrepreneurship skills- The course allows establishing an enterprise of their own in the health & food sectors thus becoming self-reliant.

PO 5- Problem analysis-Students develop the ability to analyze society-related/ applied research problems, and design and execute experiments to find relevant solutions within the limited resources.

PO 6- Advanced Usage of Technology course also allows applying advanced instrumentation tools, and online resources with an understanding of the troubleshooting and limitations.

Email –principal.raidighi@gmail.com, raidighicollege95@gmail.com

PO 7- Ethics-Commitment towards professional ethics and responsibilities as a social endeavour to bring harmony with nature.

PO 8- Lifelong learning- Scientific skills for industrial applications and entrepreneurship.

PROGRAM SPECIFIC OUTCOMES (PSOs)

On successful completion of B. Sc., Food and Nutrition program, the Graduate will be able to:

PSO 1- Sustainable approach, sensitivity towards community people's health.

PSO 2- Understanding the role and importance of dieticians and nutritionists in nutrition and health education of community people.

PSO 3- Development of an understanding of physiological mechanisms of the human body and pathophysiological processes of diseases and their management through diet.

PSO 4- to enter the teaching profession at school/ college/ university level after higher studies in related field.

PSO 5- Development of an understanding of food laws, national healthcare delivery system, national and international agencies in the management of diseases and address the problem of malnutrition in communities and family level.

PSO 6- Developing diet planning skills for healthy and diseased individuals in society for better health management and prevention of diseases.

Department of English

The Department of **English** runs Undergraduate Honours and General Courses under the Choice-Based Credit System (CBCS) introduced in 2018-19 session. As per the Syllabi of the courses, approved by the University of Calcutta, the dept. offers both Core Courses and General Elective Courses, and also offers Ability Enhancement Compulsory Courses (AECC) in English language to all undergraduate students of the college.

At Raidighi College, the undergraduate course of study in English literature intends to offer the students a fair idea about the trends in British Literature, primarily. With students coming mostly as first generation learners and from rural interiors, it seems challenging at first to inculcate within them the unmistakable sense of urbanity that comes with the linguistic paradigm of British Literature. However, beyond that, throughout the three years, the department tries to do justice to the broader name it comes under --- 'humanities'. More than practical utility, a course on literature comes with a promise to provide an insight into the finer humanitarian values of the world, and nourish the scope of creative faculty and imagination in the young minds. In time, if a student is able to get into this scheme of things, the course transcends beyond literary boundaries and plays its part in making the students better, compassionate citizens.

Besides, on practical grounds, English, being a language of official purpose, prepares the students for various scopes of employment through competitive examinations, keeping them at par with the

formal trends and practices of the world. A thorough reading of English literature in the undergraduate course also opens up scopes for higher studies for the students to pursue, and join the fields of research and teaching.

Subject Outcomes (Nos)	Subject Outcomes (SO)
SO 1	To prepare the students for a successful career in academics in government sector/ private sector.
SO 2	To provide strong foundation in basic English language skills, both reading and writing.
SO 3	To identify and analyse basic human concerns in literary works, and thereby, relate them to the present time.
SO 4	To motivate them for higher education and to take up research.
SO 5	To provide them with scopes and encouragement for careers in disciplines that are not directly under but strongly connected to English language and literature.

Skill Enhancement Course Objectives and Outcomes

- **Historical Tourism** – to build elementary skill of conducting historical place visit, writing place visit report and to transmit basic concept about heritage tourism.
- **Museums and Archives** - to build basic concept about the conservation methods of our heritage and also to enhance skill on writing Museum survey report.

Department of History Programme Outcomes (PO)

PO1 - Critical Thinking: Take informed actions after identifying the assumptions that frame our thinking and actions, checking out the degree to which these assumptions are accurate and valid, and looking at our ideas and decisions (intellectual, organizational, and personal) from different perspectives.

PO2 - Effective Communication: Speak, read, write and listen clearly in person and through electronic media in English and in one Indian language, and make meaning of the world by connecting people, ideas, books, media and technology.

PO3 - Social Interaction: Elicit views of others, mediate disagreements and help reach conclusions in group settings.

PO4 - Effective Citizenship: Demonstrate empathetic social concern and equity centred national development, and the ability to act with an informed awareness of issues and participate in civic life through volunteering.

PO5 - Ethics: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them.

PO6 - Environment and Sustainability: Understand the issues of environmental contexts and sustainable development.

PO7 - Self-directed and Life-long Learning: Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes.

Programme Specific Outcomes (PSO)

PSO1 – Students will be able to demonstrate their knowledge of the chronology, narrative, major events, personalities and turning points of the history of India and the world.

PSO2 – Students will be able to offer multi-causal explanations of major historical developments based on a contextualized analysis of interrelated political, social, economic, cultural and intellectual processes.

PSO3 – Students will be able to extract evidence from primary sources by analyzing and evaluating them in relation to their cultural and historical context and use that evidence to build and support an argument.

PSO4 – Students will be able to evaluate secondary historical sources by analyzing them in relation to the evidence that supports them, their theoretical frameworks, and other secondary historical literature.

PSO5 – The programme will be helpful in developing among the students the ability to distinguish between fact and fiction while understanding that there is no one singular historical truth.

PSO6 – Should be able to construct original historical arguments using a blend of primary and secondary source materials.

PSO7 – Students will be able to ponder over the facts how women have taken responsibilities in the social, economic and religious functionalities in order to be considered equal as their male counterparts.
