Raidighi College Tackles Thalassemia with Awareness Camp

Raidighi College joined forces with Diamond Harbour Govt. Medical College and Hospital on February 20th, 2020, for a crucial awareness camp on Thalassemia control. This joint initiative saw 82 eager students participate, eager to learn and contribute to controlling this genetic blood disorder.

The event kicked off with a powerful keynote speech by Principal Dr. Jana, setting the stage for deeper understanding. Following his address, esteemed doctors from the government hospital shared their valuable insights on various aspects of Thalassemia.

Their presentations likely covered:

- **Explaining the science:** Demystifying the genetic basis of Thalassemia and its different types.
- **Raising awareness of symptoms:** Educating participants about early signs and potential complications.

•**Highlighting treatment options:** Exploring available avenues of blood transfusions, medications, and bone marrow transplants.

•**Promoting preventive measures:** Emphasizing the importance of genetic testing and carrier screening before marriage.

The participation of local Dr. Alope Jaladata added a layer of community relevance, connecting the global issue to the local context. By involving young students, the camp not only disseminated knowledge but also nurtured potential advocates for future prevention and support efforts.

Through this collaborative effort, Raidighi College and Diamond Harbour Govt. Medical College and Hospital took a significant step towards raising awareness about Thalasemia control. The combined expertise and enthusiastic participation likely left a lasting impact, empowering individuals to make informed choices and work towards a future where Thalassemia's burden is significantly reduced.
